#### 1.2. Management report of the undertaking for collective investment

Ladies and Gentlemen

We are pleased to present the annual financial statements on 31st March 2023 SICAV of the Belgian Investment Trust BELFIUS SUSTAINABLE.

#### 1.2.1. Information for shareholders

Candriam Sustainable is a Variable Capital Investment Trust (SICAV) that has opted for investments meeting the requirements of Directive 2009/65/EC and is governed, with regard to its operation and investments, by the law of 3rd August 2012 relating to certain forms of collective investment undertakings meeting the requirements of Directive 2009/95/EC and undertakings investing in debt securities

The Company has opted for the category of investments mentioned in article 7, paragraph 1,  $1^{\circ}$  of the Act of three August two thousand and twelve on certain forms of collective management of investment portfolios.

The company was incorporated on 2nd March 2000 under the name "Stimulus Invest". On 1st October 2002, the General Meeting of Shareholders decided to change the company's name to Dexia Sustainable. On 2 February 2014 the company changed its name to Candriam Sustainable.

The extraordinary general meeting of 19 January 2022 decides to change the management company from Candriam to Belfius Investment Partners and the name of the sicav changes to Belfius Sustainable.

The name of the sicav is changed to Belfius Sustainable and the classes N, I, Y, Lock, R, R2 and Z are deleted.

The decisions will come into force on 1 February 2022.

#### 1.2.2. Overview of the markets

In the United States in the second quarter 2022, bottlenecks in supply chains were accentuated by the zero-Covid policy practised on a very large scale in China. Despite the collateral effects of the conflict in Ukraine on commodity prices and oil (around \$110 per barrel on average in the second quarter), economic activity indicators remained buoyant and the labour market remained tense. These developments pushed the ten-year rate to almost 3.5% in mid-June. In response to rising prices, the Federal Reserve raised its benchmark rate twice: first in early May by 50 basis points and then in mid-June by 75 basis points. In this new environment with credit becoming more expensive and household purchasing power coming under pressure, consumer confidence weakened sharply. The end result was that growth was again very slightly negative (-0.1% quarter over quarter after -0.4% in the first quarter). Over the quarter, the ten-year rate rose by 65 basis points to 2.97%. The stock market fell 16.4%. In July, the ten-year rate hovered around 3%. Indeed, the ISM survey of the manufacturing sector and monthly job creations were slightly lower than in previous months, while in mid-July inflation exceeded 9%. However, at the end of July, the 75 basis point rate increase in the Federal Reserve's benchmark rate up to 2.5% and the tension created by Nancy Pelosi's visit to Taiwan weighed down on rates. Despite an initial fall in inflation monthon-month since May 2020, at the end of August, the Federal reserve Chairman recalled that a return to price stability - inflation was still 8.3% year-on-year – would require a restrictive monetary policy and this for a certain period of time. Indeed, despite a slowdown in the manufacturing sector due in part to the strong increase in the dollar, the economy continued to create more than one million jobs every three months, the unemployment rate approached 3.5%, and wage growth was significant. In this environment, on 21 September, the members of the FOMC (Federal reserve) raised the benchmark rate again by 75 basis points to 3.25%, and drastically revised their forecasts for the federal funds rate upwards for the years to come. For 2023, FOMC members expect this rate to be around 4.65%, compared to an estimate of only 3.85% in June. The ten-year rate closed out the third quarter at 3.8% up 83 basis points over the end of June. The latest developments as well as the impact on the real estate sector of significantly higher mortgage rates weighed negatively on the stock market, which fell by 5.3% over the quarter. In the fourth quarter, like the global manufacturing sector, the ISM Manufacturing Survey fell below the 50 mark in response to the rising dollar and the global economic slowdown. Although the pace of monthly job creations slowed somewhat, yet still above 250,000, core inflation remained at 6% and the service sector continued to be buoyant. Given this, and to get inflation back to 2% in the medium-term, the Federal Reserve raised its benchmark rate twice: the first time in early November by 75 basis points and then in mid-December by 50 basis points (up to 4.5%). All in all, 2022 was the year of the unexpected with a conflict at Europe's doorstep, much higher than expected inflation, the most stringent monetary tightening since 1980 and, despite everything, growth of 2.1% in 2022 after 5.9% in 2021. However, developments in 2022 weighed on the S&P500 index, which closed out the year down 19.4% to 3840, despite a rebound of more than 7% in the last quarter. As for the ten-year rate, it changed little during the last quarter. This rate closed out the year at 3.83%, up 233 basis points over the year. In January and February 2023, apart from residential real estate (-10.6% in 2022 compared to 2021), most indicators seemed to rule out a sharp downturn, despite past rate increases by the Federal reserve. Indeed, about 800,000 new jobs were still created. The ISM services index was at 55 in February. Total inflation (6% in February 2023) has been steadily declining since its peak in mid-2022 (thanks to reduced supply chain tensions and lower energy and industrial metal prices), but core inflation is still falling very slowly. This is why the Federal Reserve increased its benchmark rate by 25 basis points to 4.75% on 1 February. Indeed, although goods inflation is slowing, the "real estate" component of inflation (over 30% of the CPI index) and that of non-real estate services are not slowing down. Moreover, although wage growth is slowing, it is still significant and is an important factor in the price of services. All these elements pushed the ten-year rate beyond 4% at the beginning of March. However, the closures by the authorities of the 16th largest American bank (Silicon Valley Bank (SVB)) on March 10, following excessively large deposit withdrawals in the previous days, and, a few days later, Signature Bank, raised fears of a risk of contagion to other medium-sized banks. In response, the FDIC, in

#### 1.2 Management report of the undertaking for collective investment (continued)

consultation with the Federal reserve and the US Treasury, invoked a "Systemic Risk Exception" which enabled the FDIC to insure all the deposits of these two banks (both insured deposits (< \$250,000) and uninsured deposits). To avoid a liquidity problem, the Fed opened a new Bank Term Funding Program (BTFP), the specificity of which is that government bonds serving as collateral are valued at par and not at market prices. With the risk of contagion seemingly nipped in the bud and the stress on financial markets declining, the economic context and the level of core inflation pushed the Federal reserve to increase its benchmark rate by 25 bps to 5% on March 22. In all, at the end of March, the ten-year rate fell by 35 basis points to 3.48%. The stock market rose by 7.0% over the quarter. Indeed, the latest developments led to downward revisions of what the Fed's terminal rate, and thus the potential brake on the economy, would be.

In the euro area, the second quarter 2022 was marked by high energy, industrial metals and agricultural produce prices due to Russia cutting off gas supplies to those countries refusing to pay for them in roubles and by the reduction in gas supplies to Germany. In all, from May on, inflation stood at over 8%. In this environment, markets anticipated several European Central Bank (ECB) rate increases, pushing all European rates up. The German ten-year rate exceeded 1.7%, whereas the Italian ten-year rate passed the 4% mark. The importance of the rate spread led the ECB to meet urgently on 15 June, and announce a new "anti-fragmentation" instrument for the euro area. From mid-June, however, the possibility of going into recession became a somewhat more likely scenario for markets, pushing the German ten-year rate down. Over the quarter, the German ten-year rate rose by 86 basis points to 1.37%. The stock market fell 12%. Despite the above-mentioned developments, GDP rose by 0.9% quarter-on-quarter in the second quarter and the unemployment rate was historically low (6.7%). In July, however, household and business confidence fell further. Indeed, despite the fall in the prices of many commodities, the extremely high level of gas prices and supply shortage risks weighed down on confidence. In this environment, despite an expected slowdown in growth, but with inflation continuing to rise, on July 21, for the first time in eleven years, the ECB raised its benchmark rate by 50 basis points to 0.5% and set the deposit facility rate at 0%. This put a temporary stop to the depreciation of the euro against the dollar which was now at parity. However, the outlook for growth and inflation continued to deteriorate over the summer. At the end of August, gas prices in Europe reached astronomical levels. PMI activity indicators all fell below the fifty mark (meaning a contraction in activity) and, simultaneously, inflation reached close to ten percent in September. In addition to this, the euro continued to fall against the dollar (below parity) fuelling inflation through imports, leading the ECB to decide to increase its benchmark rate by another 75 basis points up to 1.25% on 8 September. At the end of September, the German ten-year closed out the third quarter at 2.11%, i.e. up 74 basis points compared to June. The stock market fell by 4.7% over the same period. However, despite these developments, growth remained positive each quarter up to the third quarter, thanks in particular to the labour market, which remained well oriented. At the beginning of the fourth quarter, OPEC+ decided to reduce production by 2 mbd from November to counteract the expected decline in oil prices as a result of the slowdown in global growth - the IMF forecast global growth of 2.7% in 2023 compared to 3.2% in 2022. Given this, and to ensure inflation expectations remain anchored, especially as European governments announced more or less significant economic stimulus packages, the ECB raised its benchmark rate twice: the first time, at the end of October, by 75 basis points and then in mid-December by 50 basis points (up to 2.5%). At the end of October, Germany announced a two hundred billion EUR stimulus plan. The fall in gas prices in the fourth quarter reduced tensions somewhat enabling the growth outlook for 2023 to be slightly less negative. This perspective drove a strong increase in the stock market in the fourth quarter (+12.5%). Despite this, developments in 2022 weighed on the stock market, which fell by 14.5% over the year. As for the German ten-year rate, it ended the month of December higher, in the wake of the ECB's announcements in mid -December (continued monetary tightening and a reduction in the Asset Purchase Programme). This rate closed out the year at 2.56%, up 274 basis points over the year. At the start of 2023, while total inflation (8.5% in February) had been steadily declining since its peak in October 2022, core inflation continued to increase (5.6% in February) in a context of a tense labour market. The unemployment rate was 6.6 per cent and wage growth was significant. This, combined with the on-going fall in gas prices, led to an upwards revision of growth forecasts along with the expected ECB terminal rate. The ECB increased its key rate by 50 basis points to 3% on 2 February. Following the developments in the American banking system, Credit Suisse came under attack on the stock market during the week of 13 March. This did not prevent the ECB from raising its benchmark interest rate by 50 basis points to 3.5% at its monetary policy meeting on 16 March. Indeed, as Christine Lagarde pointed out, the European banking sector is resilient, well-capitalized and has no liquidity problems. The other reason for this rise was the ECB's latest macroeconomic forecasts, which showed that inflation was expected to remain too high for too long. Over the weekend of 18 and 19 March, in order to avoid a catastrophic last-minute intervention, the Swiss National Bank and the Swiss Financial Market Supervisory Authority organised the takeover of Credit Suisse by UBS. In all, over the quarter, the German ten-year rate fell by 27 basis points to 2.3%. The stock market rose by 11.9%.

#### **1.2.3.** Description of the main risks facing the company

The risks facing the company differ depending on each subfund's investment policy. Please find below a table setting out the main risks by subfund. The assessment of the risk profile of each subfund is based on a recommendation by the Belgian Association of Asset Managers (Association belge des Asset Managers), which can be consulted on the website www.beama.be.

Information relating to the company's exposure to price risks credit risks liquidity risks and cash flow risks

In this respect, please refer to the summary tables of risks.

#### 1.2.8. Vote by proxy

At its meeting on 28th January 2004, the company's Board of Directors decided to grant Candriam, the manager of the Investment Trust, authority to exercise the voting rights attaching to the underlying assets held by the Trust.

Candriam has drawn up and implemented a voting policy founded on four principles of corporate governance on which it bases its voting decisions:

- 1. Protection of all shareholders' rights according to the rule: "one share one vote one dividend".
- 2. Guarantee of equal treatment of shareholders, including minority and foreign shareholders.
- 3. Accurate and transparent reporting of financial information.
- 4. Responsibility and independence of the Board of Directors and external auditors.

When deciding to vote, Candriam ensures that it has obtained all the information necessary to enable it to reach its decision. Candriam's financial analysts study the resolutions presented to the shareholders, taking into account the voting recommendations given by outside corporate governance advisors. Candriam nevertheless retains its total independence when casting its votes.

Candriam has decided actively to exercise the voting rights attaching to shares in leading European companies. This decision is testimony to Candriam's willingness to assume its responsibilities in relation to corporate governance and to exercise fully the voting rights in the companies in which it invests on behalf of its customers.

That being the case, the Manager of Belfius Sustainable attended the Annual General Meetings of the following companies:

# $\textbf{1.2.9.} \ \ Commissions \ and \ recurring \ fees \ borne \ by \ the \ SICAV \ (in \ EUR)$

### **Remuneration of directors:**

Remuneration of directors: Directors are appointed free of charge, with the exception of the following directors, who are remunerated as follows:

Gunther Wuyts: EUR 1,000 per yearAnne Heldenbergh: EUR 1,000 per yearChristoph Finck: EUR 1,000 per year

#### 1.2 Management report of the undertaking for collective investment (continued)

#### 1.2.10. Remuneration policy

Belfius Investment Partners has adopted a remuneration policy that complies with Belgian and European legislation applicable to management companies. As a subsidiary of the Belfius Group, BIP also complies with the principles applicable to Belfius Bank and its subsidiaries.

The objective of BIP's remuneration policy is to promote sound and efficient risk management, discouraging excessive risk-taking or risk-taking that is incompatible with the risk profiles of the funds under management. It is designed to ensure that the interests of the funds under management are always paramount and that conflicts of interest do not arise.

Its main features are as follows:

- Scope: The functions to which this remuneration policy applies have been carefully identified in the light of qualitative and quantitative
  criteria. In general, the policy covers all functions that have a significant influence on the risk incurred by a fund under management or
  by the management company itself, as well as the functions that control these risks.
- Principles: The remuneration policy balances fixed and variable components. If variable remuneration is paid, it is conditional on the achievement of objectives defined over the long term and linked to the performance and risk control of the funds under management. The remuneration policy also provides for variable remuneration to be paid partly in the form of shares in the funds under management and for its payment to be spread over several years, as well as for its eventual reimbursement, thus ensuring that the investor's interests continue to converge between the funds under management and their manager.
- Governance and control: In accordance with Esma's Guidelines on remuneration policies for UCITS/CPF managers, BIP reports to the
  parent company's remuneration committee, which is responsible for preparing remuneration decisions.

Further information on how these considerations are taken into account in the remuneration policy of Belfius Investment Partners, including a description of the method of calculation of the remuneration and the rules of payment, the identity of the persons responsible for granting the remuneration and its payment, can be found on the website of Belfius Investment Partners (https://www.belfiusip.be/fr/politique/index.aspx) and in printed form on request and free of charge

The consideration of the sustainability risk and its impacts can also be consulted and updated on a regular basis.

#### 1.2 Management report of the undertaking for collective investment (continued)

# 1.2.11. Information communicated to investors pursuant to Chapter II, Part 1, Section 3 of the Annex to the Royal Decree of 10 November 2006 (introduced by the Royal Decree of 25 February 2017, effective 27 March 2017)

**Belfius Investment Partners** has a dual licence, namely on the one hand as a management company in accordance with the law of 3 August 2012 relating to undertakings for collective investment which comply with the conditions of Directive 2009/65/EC and undertakings for collective investment in debt securities and on the other hand as an alternative investment fund manager in accordance with the law of 19 April 2014 relating to undertakings for collective investment and their managers.

The responsibilities of Belfius Investment Partners under these two laws are similar and Belfius Investment Partners believes that its staff is remunerated in the same way for tasks relating to the administration of UCITS or UCITS.

Candriam paid its staff the following amounts for its financial year ending 31 December 2022:

#### Candriam Luxembourg branch:

1/Total gross amount of fixed remuneration paid (excluding payments or benefits that can be considered as part of a general and non-discretionary policy and having no incentive effect on risk management):
EUR 16 496 391

2/Total gross amount of variable remuneration paid : EUR 7 603 281.

3/Number of beneficiaries: 147

Aggregate amount of remuneration, broken down between senior management and staff of the manager whose activities have a significant impact on the risk profile of the fund. Candriam's systems do not allow such identification by fund under management. Therefore, the figures below present the aggregate amount of remuneration at the overall Candriam level.

4/Aggregated amount of senior management remuneration: EUR 4 123 181.

5/Aggregated amount of remuneration of Candriam staff whose activities have a significant impact on the risk profile of the funds it manages (excluding senior management): EUR 2,274,454.

The remuneration policy was last reviewed by Candriam's Remuneration Committee on 29 January 2021 and was adopted by Candriam's Board of Directors.

#### Candriam Belgian branch:

1/Total gross amount of fixed remuneration paid (excluding payments or benefits that can be considered as part of a general, non-discretionary policy and having no incentive effect on risk management):
EUR 24 652 347

2/Total gross amount of variable remuneration paid : EUR 10 435 950.

3/Number of beneficiaries: 256

Aggregate amount of remuneration, broken down between senior management and staff of the manager whose activities have a significant impact on the risk profile of the fund. Candriam's systems do not allow such identification by fund under management. Therefore, the figures below present the aggregate amount of remuneration at the overall Candriam level.

4/Aggregated amount of senior management remuneration : EUR 5 059 679.

5/Aggregated amount of remuneration of Candriam staff whose activities have a significant impact on the risk profile of the funds it manages (excluding senior management): EUR 4,582,833.

The remuneration policy was last reviewed by Candriam's remuneration committee on 29 January 2021 and was adopted by Candriam's board of directors.

#### 1.2 Management report of the undertaking for collective investment (continued)

Belfius Investment Partners paid the following amounts to its staff in its financial year ending 31 December 2022:

1/Total gross amount of fixed remuneration paid (excluding payments or benefits that can be considered as part of a general and non-discretionary: EUR 5,933,070

2/Total gross amount of variable compensation paid: EUR 452,500

3/Number of beneficiaries: 27

4/ Aggregate amount of remuneration broken down between senior management and staff of the fund manager whose activities have a significant impact on the risk profile of the OPCA: The systems of Belfius Investment Partners do not allow such identification per managed OPCA. Therefore, the figures below present the aggregate amount of remuneration at the global level of Belfius Investment Partners.

5/Aggregated amount of senior management remuneration: EUR 1 295 476

6/Aggregated amount of remuneration of Belfius Investment Partners staff whose activities have a significant impact on the risk profile of the OPCAs it manages (excluding senior management): EUR 4 233 694

#### 1.2.12. Swing Pricing

#### **Anti-Dilution Mechanism**

Application

A protection mechanism intended to avoid performance dilution ("Anti-Dilution Mechanism") has been put in place on all sub-funds.

• Description of the Anti-Dilution Mechanism and applicable thresholds

The Anti-Dilution Mechanism put in place is intended to save existing investors from having to bear expenses incurred for transactions on portfolio assets performed in the wake of significant subscriptions to or redemptions from the sub-fund by investors.

Indeed, when there are significant subscriptions to or redemptions from the sub-fund, the asset manager must invest/disinvest the corresponding amounts, thus generating large transactions which may entail variable transaction fees depending on the asset types concerned.

These fees are mainly taxes on certain markets and execution fees billed by brokers. These fees can be fixed amounts or variable in proportion to the volumes traded and/or take the form of the difference between the bid or ask prices for a financial instrument on the one hand and the valuation or average price on the other (typical situation in bond trading for example).

The goal of the anti-dilution mechanism is therefore to have these costs borne by the investors at the origin of the subscription/redemption transactions concerned and to protect existing investors.

In practice, on valuation dates on which the difference between the amount of subscriptions and the amount of redemptions in a subfund (i.e. net transactions) exceeds a threshold established in advance by the Board of Directors, the latter orders the administrative agent to determine the net asset value by adding to the assets (for net subscriptions) or deducting from the assets (for net redemptions)

- a fixed percentage of fees and costs corresponding to market practices in buying or selling securities (when the sub-fund carries out transactions on equities, ETFs and/or funds),
- and/or a factor representing half the spread between the bid and ask prices of the bonds and taking account of market conditions at the time (when the sub-fund carries out transactions on bonds).

This is the Swing Pricing mechanism.

- Impacts of activating the Anti-Dilution Mechanism and the applicable Factor
  - in case of net subscriptions: increase in the net asset value on that date (this increase will apply to both subscribing and redeeming investors),
  - in case of net redemptions: reduction in the net asset value on that date (this reduction will apply to both subscribing and redeeming investors).

This increase or reduction in the net asset value is called the "Factor" of the Anti-Dilution Mechanism.

The scope of this variation depends on the estimate made by the Management Company of the transaction fees applied to the types of assets concerned.

The adjustment to the valuation method will not exceed 2% of the net asset value

#### 1.2 Management report of the undertaking for collective investment (continued)

• Process by which it is decided to apply the Anti-Dilution Mechanism

The Board of Directors has entrusted implementation of the Anti-Dilution Mechanism to the Management Company.

The Management Company has drawn up a policy detailing how the Anti-Dilution Mechanism works and has implemented operational processes and procedures in order to oversee application of the Anti-Dilution Mechanism by the Administrative Agent and the Transfer Agent.

The policy detailing the Management Company's Anti-Dilution Mechanism has been duly validated by the Board of Directors.

• Methodology to be applied in case of performance fees

If performance fees must be calculated, these fees are calculated before any application of the Anti-Dilution Mechanism, making these fees immune to the impact of the Anti-Dilution Mechanism.

Subfund	Upward adjustment factor at	Downward adjustment factor at
	31/03/2023	31/03/2023
Belfius Sustainable Low	0.06	0.06
Belfius Sustainable Medium	0.07	0.06
Belfius Sustainable High	0.07	0.06

No swing pricing was applied during the period from 01/04/2022 to 31/03/2023.

Upward adjustment factor: the coefficient by which the net asset value is increased on net inflows. Downward adjustment factor: the coefficient by which the net asset value is reduced on net outflows.

#### 1.2.13. Dividend proposal

The Board of Directors of Belfius Sustainable, which met on 23 May 2023, approved the dividend proposal set out below. This proposal was submitted for approval to the Ordinary General Meeting held on 16 June 2023.

Compartment	Isin code	Gross amount per distribution share	Net amount per distribution share (*)	Coupon
Belfius Sustainable Low, classe C	BE0945314491	0,02 EUR	0,014 EUR	N° 18
Belfius Sustainable Medium, classe C	BE0945316512	0,06 EUR	0,042 EUR	N° 18
Belfius Sustainable High, classe C	BE0945312479	4,70 EUR	3,29 EUR	N° 18

<sup>\*</sup>Dividends are subject to 30% withholding tax in Belgium.

The dividends will be payable from 17 July 2023.

### 1.3. Auditor's Report

# Deloitte.

# Belfius Sustainable NV Bevek under Belgian law, category UCITS

Statutory auditor's report to the shareholders' meeting for the year ended 31 March 2023 - Annual accounts

The original text of this report is in Dutch

#### 1.3 Auditor's Report (continued)

Belfius Sustainable NV Bevek under Belgian law, category UCITS | 31 March 2023

# Statutory auditor's report to the shareholders' meeting of Belfius Sustainable NV for the year ended 31 March 2023 - Annual accounts

In the context of the statutory audit of the annual accounts of Belfius Sustainable NV (the "company"), we hereby submit our statutory audit report. This report includes our report on the annual accounts and the other legal and regulatory requirements. These parts should be considered as integral to the report.

We were appointed in our capacity as statutory auditor by the shareholders' meeting of 18 June 2021, in accordance with the proposal of the board of directors ("bestuursorgaan" / "organe d'administration"). Our mandate will expire on the date of the shareholders' meeting deliberating on the annual accounts for the year ending 31 March 2024. We have performed the statutory audit of the annual accounts of Belfius Sustainable for 24 consecutive periods.

#### Report on the annual accounts

#### Unqualified opinion

We have audited the annual accounts of the company, which comprises the balance sheet as at 31 March 2023 and the income statement for the year then ended, as well as the explanatory notes. The annual accounts show total assets of 2 946 413 261,59 EUR and the income statement shows a loss for the year ended of 255 672 345,44 EUR.

In our opinion, the annual accounts give a true and fair view of the company's net equity and financial position as of 31 March 2023 and of its results for the year then ended, in accordance with the financial reporting framework applicable in Belgium.

Name	Currency	Net asset value	Result
Low	EUR	124 676 514,61	-12 180 497,05
Medium	EUR	2 550 677 145,85	-225 007 439,74
High	EUR	271 059 601,13	-18 484 408,65

#### Basis for the unqualified opinion

We conducted our audit in accordance with International Standards on Auditing (ISA), as applicable in Belgium. In addition, we have applied the International Standards on Auditing approved by the IAASB applicable to the current financial year, but not yet approved at national level. Our responsibilities under those standards are further described in the "Responsibilities of the statutory auditor for the audit of the annual accounts" section of our report. We have complied with all ethical requirements relevant to the statutory audit of the annual accounts in Belgium, including those regarding independence.

We have obtained from the board of directors and the company's officials the explanations and information necessary for performing our audit.

We believe that the audit evidence obtained is sufficient and appropriate to provide a basis for our opinion.

#### Other matters

The model for periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852, included in the appendix to the annual report is not subject to legal control.

#### Responsibilities of the board of directors for the preparation of the annual accounts

The board of directors is responsible for the preparation and fair presentation of the annual accounts in accordance with the financial reporting framework applicable in Belgium and for such internal control as the

#### 1.3 Auditor's Report (continued)

Belfius Sustainable NV Bevek under Belgian law, category UCITS | 31 March 2023

board of directors determines is necessary to enable the preparation of the annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts, the board of directors is responsible for assessing the company's ability to continue as a going concern, disclosing, as applicable, matters to be considered for going concern and using the going concern basis of accounting unless the board of directors either intends to liquidate the company or to cease operations, or has no realistic alternative but to do so.

#### Responsibilities of the statutory auditor for the audit of the annual accounts

Our objectives are to obtain reasonable assurance about whether the annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue a statutory auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISA will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts.

During the performance of our audit, we comply with the legal, regulatory and normative framework as applicable to the audit of annual accounts in Belgium. The scope of the audit does not comprise any assurance regarding the future viability of the company nor regarding the efficiency or effectiveness demonstrated by the board of directors in the way that the company's business has been conducted or will be conducted.

As part of an audit in accordance with ISA, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the annual accounts, whether due to fraud or
  error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is
  sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material
  misstatement resulting from fraud is higher than for one resulting from an error, as fraud may involve
  collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that
  are appropriate in the circumstances, but not for the purpose of expressing an opinion on the
  effectiveness of the company's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the board of directors;
- conclude on the appropriateness of the use of the going concern basis of accounting by the board of
  directors and, based on the audit evidence obtained, whether a material uncertainty exists related to
  events or conditions that may cast significant doubt on the company's ability to continue as a going
  concern. If we conclude that a material uncertainty exists, we are required to draw attention in our
  statutory auditor's report to the related disclosures in the annual accounts or, if such disclosures are
  inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the
  date of our statutory auditor's report. However, future events or conditions may cause the company to
  cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the annual accounts, and whether the annual
  accounts represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, amongst other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

#### 1.3 Auditor's Report (continued)

Belfius Sustainable NV Bevek under Belgian law, category UCITS | 31 March 2023

### Other legal and regulatory requirements

#### Responsibilities of the board of directors

The board of directors is responsible for the preparation and the content of the directors' report on the annual accounts, for maintaining the company's accounting records in compliance with the legal and regulatory requirements applicable in Belgium, as well as for the company's compliance with the Code of companies and associations and the company's articles of association.

#### Responsibilities of the statutory auditor

As part of our mandate and in accordance with the Belgian standard complementary to the International Standards on Auditing (ISA) as applicable in Belgium, our responsibility is to verify, in all material respects, the director's report on the annual accounts and compliance with certain obligations referred to in the Code of companies and associations and the articles of association, as well as to report on these matters.

#### Aspects regarding the directors' report

In our opinion, after performing the specific procedures on the directors' report on the annual accounts, the directors' report on the annual accounts is consistent with the annual accounts for that same year and has been established in accordance with the requirements of articles 3:5 and 3:6 of the Code of companies and associations.

In the context of our statutory audit of the annual accounts we are also responsible to consider, in particular based on information that we became aware of during the audit, if the directors' report on the annual accounts is free of material misstatement, either by information that is incorrectly stated or otherwise misleading. In the context of the procedures performed, we are not aware of such material misstatement.

#### Statements regarding independence

Our audit firm and our network have not performed any prohibited services and our audit firm has remained independent from the company during the performance of our mandate.

#### **1.3** Auditor's Report (continued)

Belfius Sustainable NV Bevek under Belgian law, category UCITS | 31 March 2023

#### Other statements

- Without prejudice to certain formal aspects of minor importance, the accounting records are maintained in accordance with the legal and regulatory requirements applicable in Belgium.
- The appropriation of results proposed to the general meeting is in accordance with the relevant legal and regulatory requirements.
- We do not have to report any transactions undertaken or decisions taken which may be in violation of the company's articles of association or the Code of companies and associations.

Signed at Zaventem.

#### 1.7. Summary of booking and valuation rules

#### 1.7.1. Summary of rules

The assets of the SICAV (the mutual fund) are evaluated as indicated below, in compliance with the rules drawn up by the royal decree of 10 November 2006 concerning accounting procedures, the annual accounts and the periodic reports of given public collective investment undertakings with a variable number of units:

#### 1. Securities, money market instruments and financial derivative instruments:

Securities, money market instruments and financial derivative instruments held by the SICAV are measured at their fair value. In order to determine said fair value, the following procedure must be respected:

- a) If reference is being made to parts of the assets for which there is an active market operating through the participation of third party financial institutions, the current bid price and current ask price set on this market will be applied.
- If reference is being made to parts of the assets negotiated on an active market that excludes the participation of third party financial institutions, the closing price will be applied.
- b) If the rates indicated in item a) are not available, the price of the most recent transaction will be applied.
- c) If, for any part of the given assets, there is an organised market or an OTC market, but this market is not active and the rates applicable are not representative of the fair value, or if, for any given part of an asset, there is neither an organised market nor an OTC market, the fair value is measured on the basis of the current fair value of similar parts of the assets for which there is an active market.
- d) If, for any part of the given assets, the fair value as mentioned in item c) of similar parts of the assets does not exist, the fair value of the part in question is determined by recourse to other means of valuation, respecting certain conditions; their validity, in particular, has to be regularly tested.

If, in exceptional cases, there is, in the case of equities, no organised market or OTC market, and the fair value of these equities cannot be determined reliably in compliance with the procedure outlined above, the equities in question will be evaluated at cost.

Depending on the underlying instrument, the financial derivative instruments (swap contract, forward contract and option contract) measured at their fair value are posted to sub items on the balance sheet and/or off the balance sheet.

The underlying values of the option contracts and the warrants are posted to off balance items in section "II. Underlying values of option contracts and warrants".

The notional amounts of the forward contracts and the swap contracts are posted to off balance-sheet items in "III. Notional amounts of forward contracts" and "IV. Notional amounts of swap contracts" respectively.

#### 2. Collective Investment Undertaking units

Collective Investment Undertaking units with a variable number of units held by the SICAV are measured at their fair value in compliance with the procedure outlined in item 1.

Collective Investment Undertaking units with a variable number of units held by the SICAV and for which there is no organised market or OTC market are measured on the basis of the net asset value of these units.

#### 3. Expenditure and income

The SICAV provides for known expenditure and income or for expenditure and income likely to be subject to a sufficiently accurate evaluation whenever units are issued or redeemed. Recurring expenditure and income is indicated prorata temporis in the value of the units.

# 1.7. Summary of booking and valuation rules (continued)

#### 4. Receivables and debts

Forward claims that are not represented by securities or negotiable money market instruments are measured at their fair value, in compliance with the procedure outlined in item 1.

Sight assets on credit institutions, current account commitments to credit institutions, short term amounts receivable and payable other than those concerning credit institutions, tax credits and tax debts as well as any other debts will be measured at their nominal value.

Should the investment policy not be mainly focused on the investment of resources in deposits, liquidities or money market instruments, the board of directors can, taking into account the relatively low importance of the forward claims, opt to have these measured at their nominal value.

#### 5. Assets expressed in another currency

Assets expressed in a currency other than the reference currency of the subfund in question will be converted into the currency of said subfund on the basis of the average spot price between the representative bid and ask rates. Any positive and negative discrepancies resulting from the conversion will be posted to the P&L account.

#### 1.7.2. Exchange rates

#### 2. INFORMATION ABOUT THE SUBFUND

#### 2.1. Management report of the sub-fund

#### 2.1.1. Launch date of the sub-fund and subscription price of the shares

The Medium sub-fund (formerly known as Dexia Sustainable European Balanced Medium) was launched on 1 April 1996 (the Medium sub-fund has been activated since 1 July 2000 through the contribution of the assets of the BACOB Stimulus Dynamic sub-fund, a sub-fund of BACOB Investments) with a fixed net asset value per share of EUR 2.48.

The shares of the Y CAP and DIS class are marketed as from 26 October 2011.

The shares of the class R CAP and DIS are marketed as from 1 October 2018.

On 30/04/2020 (NAV date), investors in class N shares will become class C investors and class N shares will cease to exist permanently.

The meeting decided to abolish the share classes N, I, Y, Lock, R, R2 and Z as of 01/02/2022.

#### 2.1.2. Financial management of the portfolio

Belfius Investment Partners Place Rogier 11 - 1210 Brussels

#### 2.1.3. Delegation of the implementation of the management of the investment portfolio

Candriam SERENITY - Bloc B, 19-21 route d'Arlon, L-8009 Strassen Grand Duchy of Luxembourg

#### 2.1.4. Distributor

Belfius Banque S.A. Place Rogier 11, 1210 Brussels

#### 2.1.5. Stock exchange listing

Non applicable.

#### 2.1.6. Aim and main outlines of the investment policy

#### Subfund objectives

The objective of the sub-fund is to enable shareholders to benefit from trends on the financial markets and to outperform the benchmark through a portfolio principally made up of Undertakings for Collective Investment (UCIs) selected by the Management Company on the basis of their expected return and socially responsible or sustainability criteria, which aim to offer a broad diversification (notably via equities and bonds of different countries and sectors). The sub-fund will focus on a balance between investments in bond UCIs and investments in equity UCIs. The sub-fund aims to have a positive environmental and social impact in the long term by investing at least 85% of net assets in UCIs which have a sustainable investment objective and/or in direct sustainable investment lines.

#### **Fund policy**

#### Permitted asset classes:

The assets of this sub-fund will be invested mainly in units of open-end UCIs.

The assets of the sub-fund may also be invested on an ancillary basis in the other asset categories mentioned in the Articles of Association attached to this document. For example, on an ancillary basis, the assets may be invested in shares, bonds, money market instruments, deposits and/or cash.

#### Special strategy:

The sub-fund will invest mainly in units of Belgian or foreign UCIs managed by Candriam, which themselves invest mainly in:

- -bonds and/or similar transferable securities such as investment grade bonds, inflation-linked bonds, etc.
- -equities and/or equity-linked securities,
- -and/or cash and money market instruments.

The proportion of assets invested in equity UCIs may be either a majority or a minority and may be reduced significantly depending on the manager's expectations regarding the development of the financial markets and in order to reduce the risk for the investor.

#### 2. INFORMATION ABOUT THE SUBFUND

#### 2.1. Management report of the sub-fund (continued)

In addition, the sub-fund may invest part of its net assets in UCIs which themselves follow specific strategies (such as commodities or other opportunities). However, these investments will always be a minority.

Both the UCIs held and the financial instruments of which they are composed may be denominated in any currency and may or may not be hedged against currency risk, depending on the manager's expectations regarding market trends. The financial instruments of these UCIs may be issued by issuers from different regions of the world, including emerging countries.

#### Information on the sustainability of investments:

This sub-fund is classified under Article 9 of the SFDR Regulation, i.e. it has a sustainable investment objective.

ESG analysis is integrated in the selection and allocation of the underlying assets and covers the entire portfolio, excluding deposits, cash and index derivatives. Derivative counterparties may not be covered by ESG analysis.

#### **ESG** analysis

In order to achieve its objective, the sub-fund invests at least 85% of the portfolio in UCIs with a sustainable investment objective and/or in direct sustainable investments

ESG analysis for the investments of the underlying UCIs managed by Candriam with a sustainable investment objective and/or for the sustainable investments held in direct lines

#### **Private issuers:**

Companies are assessed from two distinct but related angles:

-analysis of the activities (products and services) of each company in order to assess how these activities respond to the major long-term challenges in terms of sustainable development, including in particular climate change through the impact of carbon emissions from products/services, resource and waste management, such as the use of water resources, the generation of waste and its degree of toxicity, and its recycling potential; and

-analysis of each company's key stakeholder management, assessing how companies integrate the interests of their stakeholders (customers, employees, suppliers, investors, society and the environment) into their strategies, operations and strategy setting. Thus, for example, the evaluation of relations with employees covers, among other things, their working conditions, training, retention and diversity policies in place. The assessment of investor relations evaluates the quality of the governance bodies in place, the company's practices in this area, but also its business ethics.

Companies apply good governance practices.

Based on this ESG analysis, a score is assigned to each company.

UCIs with a sustainable investment objective can have several types of ESG objectives, such as climate change, gender diversity, circular economy, ... or - for countries - the promotion of democratic change and sustainable environmental practices, ....

In particular, a mutual fund sub-fund or a mutual fund may aim to achieve a carbon footprint at least 30% lower than the benchmark.

#### Sovereign issuers:

Countries are assessed on how they manage 4 key dimensions of sustainability: human capital, natural capital, social capital, economic capital.

Based on this ESG analysis, a score is assigned to each country.

The objective of having a positive long-term impact on the environment and society is evaluated through an ESG score calculated by Candriam. To achieve this sustainable objective, the weighted average ESG score of the sub-fund, including private and sovereign issuers, aims to be higher than the weighted average ESG score of the benchmark.

Based on the ESG approach adopted, the investment universe analysed is reduced by at least 20%, starting by eliminating from the investment universe analysed issuers with significant ESG risks.

UCIs not managed by Candriam, or whose management is delegated to third party managers, may have different ESG policies. The management company takes into account certain criteria in the selection of these funds in order to respect the ESG aspects described at the global level of each sub-fund.

For more information on the SFDR policy and the Taxonomy of the sub-fund please refer to the appendices attached to this report.

#### 2. INFORMATION ABOUT THE SUBFUND

#### 2.1. Management report of the sub-fund (continued)

#### Permitted transactions in derivatives:

The sub-fund may also use derivatives, such as options, futures, swaps, both on interest rates (fixed and variable rates, inflation, etc.) and on credit and currencies, and forward exchange transactions, in compliance with the legal rules in force, both for investment purposes and for hedging purposes. The investor should be aware that these types of derivatives are more volatile than the underlying products.

While the composition of the portfolio must comply with general rules and limits prescribed by law or the Articles of Association, a concentration of risk may occur in narrower geographical areas.

#### Characteristics of the bonds and debt securities:

The fixed or floating rate securities of the UCIs in position will be issued mainly by issuers deemed to be of good quality (investment grade: minimum BBB- and/or Baa3 at the time of acquisition) including governments, supranational institutions, the public sector and/or the private sector. Nevertheless, the sub-fund may hold, on an ancillary basis, UCIs investing in speculative bonds (rated below BBB-and/or Baa3 at acquisition).

The manager may vary the overall duration of the sub-fund within a range of 0 to 10 years depending on his expectations regarding the evolution of interest rates.

#### Description of the general strategy to hedge the currency risk:

The sub-fund does not intend to systematically hedge the currency risk exposure.

The investment policy ensures that the portfolio's risks are diversified. However, the evolution of the net asset value is uncertain as it is subject to the different types of risk mentioned below. This may result in a high volatility of its price

#### 2. INFORMATION ABOUT THE SUBFUND

#### 2.1. Management report of the sub-fund (continued)

#### 2.1.7. Index(es) and Benchmark(s)

Index name

50% Bloomberg Euro-Aggregate 1-10 Year Index (Total Return - including interest payments) + 20% MSCI Europe (Net Return - net dividends reinvested) + 20% MSCI USA (Net Return - net dividends reinvested) + 7.5% MSCI Emerging Markets (Net Return - net dividends reinvested) + 2.5% MSCI Japan (Net Return - net dividends disinvested)

#### Index definition

Bloomberg Euro-Aggregate 1-10 Year Index: measures the performance of investment grade bonds (minimum BBB- and/or Baa3) denominated in EUR, with a maturity between 1 and 10 years.

MSCI Europe: measures the performance of the mid and large cap segment in developed markets in Europe.

MSCI USA: measures the performance of the mid and large cap segment of the US market.

MSCI Emerging Markets: measures the performance of the mid- and large-cap segment of the emerging market countries.

MSCI Japan: measures the performance of the mid and large cap segment of the Japanese market.

Use of the index

- -in determining risk levels/parameters;
- -for performance comparison purposes.

Level of deviation of the portfolio composition from the index

As the Fund is actively managed, it does not aim to invest in all constituents of the index, nor to invest in the same proportions as the constituents of the index.

Under normal market conditions, the expected tracking error of the sub-fund will be limited to moderate, namely between 0.5% and 3%. This measure is an estimate of the deviation of the sub-fund's performance from the performance of its index. The higher the tracking error, the greater the deviations from the index. The tracking error achieved depends in particular on market conditions (volatility and correlations between financial instruments) and may therefore deviate from the expected tracking error.

Index provider

#### Bloomberg, MSCI Limited

Each provider is, since Brexit, an entity benefiting from the transitional provision of Article 51, §5 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks for financial instruments and contracts or to measure the performance of investment funds and amending Directives 2008/48/EC and 2014/17/EU and Regulation (EU) No 596/2014.

The Management Company and/or its delegates has/have in place robust written plans that cover the assumptions in which the benchmark is no longer published or in the event of substantial changes in its composition. The Board of Directors of the Fund will, on the basis of such plans and if deemed appropriate, select an alternative benchmark. Any change in the benchmark will be reflected in the Prospectus which will be amended accordingly. These plans are available, on request, at the registered office of the Management Company and/or its delegates.

### 2.1.8. Policy followed during the year

During the year, the policy followed can be broken down into a few major trends, starting with the cautious positioning at the beginning of the period when the war in Ukraine had just broken out. The portfolio was then equity neutral and underweight in terms of duration. From a regional point of view, the strongest defensive position was on Europe, since this area was the most exposed to the energy and geopolitical shocks. Moreover, emerging equities were strong tactical convictions. Unfortunately, the emerging index suffered as a combined result of China's decision to maintain the "Zero-Covid" strategy, a reopening that initially benefited the domestic economy and geopolitical tensions with the United States at the end of the period. We have maintained our positive opinion with a view to a more homogeneous catch-up later which should benefit the whole region.

Our long-term convictions, such as healthcare and consumer goods, with their defensive bias, as well as the energy transition and circular economy, were also reflected in the portfolio. The portfolio benefited from the performance of such stocks as Merck, Xylem and Iberdrola. On the other hand, certain more cyclical consumer sector stocks had a negative impact, including LVMH.

In October, our analysis of investor sentiment, market psychology and technical conditions clearly showed signs of exaggerated and widespread pessimism. We saw this extreme configuration as a signal of a forthcoming market turnaround. As a result investment strategy became more constructive and we increased the allocation to risk-on assets within the portfolio, notably via equities and high yield bonds.

#### 2. INFORMATION ABOUT THE SUBFUND

#### 2.1. Management report of the sub-fund (continued)

In terms of bonds, we were negative (underweight, short duration) as we anticipated a rise in interest rates. This underweight position partly protected our portfolios from the very rapid rate increase. With accelerated monetary tightening, yields increased during 2022. As a result, expected yields on bonds have become positive again, strongly contrasting with the previous situation. We therefore gradually increased the duration of the portfolio and were neutral at the end of the year.

We gradually took profits from our equity exposure at the end of the year in a context marked by slower growth on both sides of the Atlantic. While the US Federal reserve and the Swiss government were doing everything possible to avoid a contagion of stress spreading throughout their respective banking sectors, we focused our bond exposure on premium bonds and emerging debt while maintaining a neutral position on equities.

We inform you that no exceedance of the investment policy was recorded during the financial year.

#### 2.1.9. Future policy

Future policy will take account of financial tensions that are symptomatic of monetary tightening cycles. The temporarily high uncertainty surrounding the banking sector reflects the difficult trade-off to be made to achieve at once financial stability and price stability, and central banks will adjust their policies in reaction to developments in this area.

In the case of complacent financial markets, we would be willing to reduce risk further. Moreover, a more severe market correction would likely open up new investment opportunities in the medium term. In the longer term, the portfolio will continue to invest in themes that are in line with future energy challenges and new consumption patterns.

#### 2.1.10. Risk Class

The synthetic risk indicator makes it possible to assess the level of risk of this fund in comparison with others. The level of risk is presented via a synthetic risk indicator on a scale from 1 (lowest risk) to 7 (highest risk). It is obtained by combining the market risk measure and the credit risk measure according to a methodology defined in Annex II of Commission Regulation 2017/653 of 8 March 2017 and is available, in its most recent version, in the Key Information Document.

The main limitations of the indicator are as follows: the risk indicator is calculated on the basis of historical data, which does not prejudge future developments. Consequently, the degree of risk may change over time. Even if the fund is in the lowest risk category, the investor may suffer losses as no category is completely risk free.

The compartment falls under class 3

Rotation Percentage	49,37%	58,37%	107,55%
<b>Corrected Rotation Percentage</b>	49,36%	57,69%	106,39%

A figure close to 0 % shows that transactions relating to securities or assets, excluding deposits and cash reserves, as applicable, have been carried out over a specific period, relating only to subscriptions and reimbursements. A negative percentage ind A detailed listed of the transactions which were made during the year can be consulted free of charge at Belfius Banque S.A. with its registered office at Place Rogier 11 - 1210 Brussels provides the financial services.

### 2.6.3. Increased rotation

The context of war which prevailed throughout the entire period, led to a sharp rise in volatility on financial markets as well as strong movements in equities in terms of style or sectors. This increased volatility has led us to significantly change the portfolio allocation in order to keep it in line with our market views. We also made some portfolio adjustments related to SFDR regulations, especially in 2023. These two factors resulted in a higher portfolio turnover rate

2020-03-31

2023-03-31

The ongoing charges, as calculated in accordance with Regulation no. 583/2010 of the Commission of 1 July 2010 implementing Directive 2009/65/EC of the European Parliament and of the European Council, as regards key investor information and conditions to fulfil whenproviding key investor information or a prospectus on a durable medium other than paper or by means of a website (hereinafter « Regulation 583/2010 »), are shown in the key investor information. The concept of « ongoing charges » includes all payments deducted from the fund's assets where such deduction is required or permitted by the regulations, the articles of association or the prospectus. However, they do not include any performance fees, entry or exit charges directly paid by the investor, transaction fees, except those which would be charged by the custodian bank, the management company, the administrative agent, the SICAV's managers or any other investment advisor. Fees linked to the subscription or redemption of underlying UCI units are also included into the ongoing charges. Moreover, they do not include interest on loans and charges linked to holding derivative products (e.g. the margin calls). They are based on the costs for the previous financial year and are a percentage of the average net assets for the period concerned. In some cases, they may be expressed as a maximum amount to be charged or calculated on the basis of another one-year

## $\textbf{2.6.} \quad \textbf{Composition of the assets and key figures (continued)}$

period, or they may be based on an estimate.

## Existence of fee sharing agreements:

Fee sharing does not affect the amount of the management fee paid by the Fund to the management company.

This management fee is subject to the limitations defined in the Articles of Association. These limitations can only be modified after approval by the General Meeting.

For the financial year under review, Belfius Investment Partners passed on 88% of the management fee.

#### 2.7. Notes to the financial statements as at 31 March 2023

### 2.7.1. Fees commissions and recurring costs borne by the subfund

Fees, commissions and recurring costs borne by the subfund (Class C)

The fees:

- Management Fees at a maximum annual rate of 1.30%
- of the Administration provision at an annual rate of 0.10%
- of the Custody agent at a maximum annual rate of 0.04%
- other expenses (estimation) including the payment for Auditors, Directors and Individuals responsible for effective management at the annual rate of 0.10%

They are calculated and payable monthly on the basis of the average net asset value (excluding fees, commissions and costs accrued but not due) of the subfund's assets at the end of the month in question.

#### 2.7.2. Accrued liabilities (Balance VI C)

- The Management fee (Class C) 2 800 158,70 EUR
- The Administrative fee (Class C) 154 901,60 EUR
- The Administrative fee (general)
- 1 466,67 EUR
- The Custody agent fee (Class C) 64 619,06 EUR
- interest payable on current accounts and loans
- 2 129,84 EUR
- a provision for other annual overheads (supervisory authority's fee, auditor's fees, report costs, publication costs, etc.) 766 205,46 EUR

For a total of 3 789 481,33 EUR

### 2.7.3. Payment for auditors

Pursuant to article 3:65 §§ 2 and 4 of the Code of Companies and Associations : mention of the commissioner's emoluments. Amount of the emoluments (in EUR) Exclusive of VAT : 4 200

**2.7.** Notes to the financial statements as at 31 March 2023 ((continued))

#### 3. INFORMATION ABOUT THE SUBFUND

#### 3.1. Management report of the sub-fund

### 3.1.1. Launch date of the sub-fund and subscription price of the shares

The Low sub-fund (formerly known as Dexia Sustainable European Balanced Low) was launched on 1 April 1996 (the Low sub-fund has been activated since 1 July 2000 through the contribution of the assets of the BACOB Stimulus Defensive sub-fund, a sub-fund of BACOB Investments) with a fixed net asset value per share of EUR 2.48.

The shares of the Y CAP and DIS class are marketed as from 26 October 2011.

The shares of the class R CAP and DIS are marketed as from 1 October 2018.

On 30/04/2020 (NAV date), investors in class N shares will become class C investors and class N shares will cease to exist permanently.

The meeting decided to abolish the share classes N, I, Y, Lock, R, R2 and Z as of 01/02/2022.

#### 3.1.2. Financial management of the portfolio

### 3.1.5. Stock exchange listing

Non applicable.

### 3.1.6. Aim and main outlines of the investment policy

Subfund objectives

The objective of the sub-fund is to enable shareholders to benefit from trends on the financial markets and to outperform the benchmark through a portfolio principally made up of Undertakings for Collective Investment (UCIs) selected by the Management Company on the basis of their expected return and socially responsible or sustainability criteria, which aim to offer a broad diversification (notably via equities and bonds of different countries and sectors). The sub-fund will focus on investments in bond UCIs.

The sub-fund aims to have a positive environmental and social impact in the long term by investing at least 85% of net assets in UCIs which have a sustainable investment objective and/or in direct sustainable investment lines.

#### Fund policy

### Permitted asset classes:

The assets of this sub-fund will be invested mainly in units of open-end UCIs.

The assets of the sub-fund may also be invested on an ancillary basis in the other asset categories mentioned in the Articles of Association attached to this document. For example, on an ancillary basis, the assets may be invested in shares, bonds, money market instruments, deposits and/or cash.

### Special strategy:

The sub-fund will invest mainly in units of Belgian or foreign UCIs managed by Candriam, which themselves invest mainly in:

- $\hbox{-} bonds and/or similar securities \hbox{-} such as investment grade bonds, inflation-linked bonds, etc. \\$
- equities and/or equity-linked securities,
- and/or cash and money market instruments.

#### 3. INFORMATION ABOUT THE SUBFUND

#### 3.1. Management report of the sub-fund (continued)

The proportion of assets invested in equity UCIs is always a minority and may be reduced according to the manager's expectations regarding the development of the financial markets and in order to reduce the risk for the investor.

In addition, the sub-fund may invest part of its net assets in UCIs which themselves follow specific strategies (such as commodities or other opportunities). However, these investments will always be a minority.

Both the UCIs held and the financial instruments of which they are composed may be denominated in any currency and may or may not be hedged against currency risk, depending on the manager's expectations regarding market trends. The financial instruments of these UCIs may be issued by issuers from different regions of the world, including emerging countries.

### Information on the sustainability of investments:

This sub-fund is classified under Article 9 of the SFDR Regulation, i.e. it has a sustainable investment objective.

ESG analysis is integrated in the selection and allocation of the underlying assets and covers the entire portfolio, excluding deposits, cash and index derivatives. Derivative counterparties may not be covered by ESG analysis.

### ESG analysis

In order to achieve its objective, the sub-fund invests at least 85% of the portfolio in UCIs with a sustainable investment objective and/or in direct sustainable investments.

ESG analysis for the investments of the underlying UCIs managed by Candriam with a sustainable investment objective and/or for the sustainable investments held in direct lines

#### **Private issuers:**

Companies are assessed from two distinct but related angles:

- analysis of the activities (products and services) of each company in order to assess how these activities respond to the major long-term challenges in terms of sustainable development, including in particular climate change through the impact of carbon emissions from products/services, resource and waste management, such as the use of water resources, the generation of waste and its degree of toxicity, and its recycling potential; and
- analysis of each company's key stakeholder management, assessing how companies integrate the interests of their stakeholders (customers, employees, suppliers, investors, society and the environment) into their strategies, operations and strategy setting. Thus, for example, the evaluation of relations with employees covers, among other things, their working conditions, training, retention and diversity policies in place. The assessment of investor relations evaluates the quality of the governance bodies in place, the company's practices in this area, but also its business ethics.

Companies apply good governance practices.

Based on this ESG analysis, a score is assigned to each company.

UCIs with a sustainable investment objective can have several types of ESG objectives, such as climate change, gender diversity, circular economy, ... or - for countries - the promotion of democratic change and sustainable environmental practices, ....

In particular, a mutual fund sub-fund or a mutual fund may aim to achieve a carbon footprint at least 30% lower than the benchmark.

### Sovereign issuers:

Countries are assessed on how they manage 4 key dimensions of sustainability: human capital, natural capital, social capital, economic capital.

Based on this ESG analysis, a score is assigned to each country.

The objective of having a positive long-term impact on the environment and society is evaluated through an ESG score calculated by Candriam. To achieve this sustainable objective, the weighted average ESG score of the sub-fund, including private and sovereign issuers, aims to be higher than the weighted average ESG score of the benchmark.

Based on the ESG approach adopted, the investment universe analysed is reduced by at least 20%, starting by eliminating from the investment universe analysed issuers with significant ESG risks.

UCIs not managed by Candriam, or whose management is delegated to third party managers, may have different ESG policies. The management company takes into account certain criteria in the selection of these funds in order to respect the ESG aspects described at the global level of each sub-fund.

#### 3. INFORMATION ABOUT THE SUBFUND

#### 3.1. Management report of the sub-fund (continued)

For more information on the SFDR policy and the Taxonomy of the sub-fund please refer to the appendices attached to this report.

#### Permitted transactions in derivatives:

The sub-fund may also use derivatives, such as options, futures, swaps, both on interest rates (fixed and variable rates, inflation, etc.) and on credit and currencies, and forward exchange transactions, in compliance with the legal rules in force, both for investment purposes and for hedging purposes. The investor should be aware that these types of derivatives are more volatile than the underlying products.

While the composition of the portfolio must comply with general rules and limits prescribed by law or the Articles of Association, a concentration of risk may occur in narrower geographical areas.

#### Characteristics of the bonds and debt securities:

The fixed or floating rate securities of the UCIs in position will be issued mainly by issuers deemed to be of good quality (investment grade: minimum BBB- and/or Baa3 at the time of acquisition) including governments, supranational institutions, the public sector and/or the private sector. Nevertheless, the sub-fund may hold, on an ancillary basis, UCIs investing in speculative bonds (rated below BBB-and/or Baa3 at acquisition).

The manager may vary the overall duration of the sub-fund within a range of 0 to 10 years depending on his expectations regarding the evolution of interest rates.

### Description of the general strategy to hedge the currency risk:

The sub-fund does not intend to systematically hedge the currency risk exposure.

The investment policy ensures that the portfolio's risks are diversified. However, the evolution of the net asset value is uncertain as it is subject to the various types of risk mentioned below. This may result in a high volatility of its price.

#### 3. INFORMATION ABOUT THE SUBFUND

#### 3.1. Management report of the sub-fund (continued)

#### 3.1.7. Index(es) and Benchmark(s)

Index name

70% Bloomberg Euro-Aggregate 1-10 Year Index (Total Return - including interest payments) + 12% MSCI Europe (Net Return - net dividends reinvested) + 12% MSCI USA (Net Return - net dividends reinvested) + 4.5% MSCI Emerging Markets (Net Return - net dividends reinvested) + 1.5% MSCI Japan (Net Return - net dividends disinvested)

Index definition

Bloomberg Euro-Aggregate 1-10 Year Index: measures the performance of investment grade bonds (minimum BBB- and/or Baa3) denominated in EUR, with a maturity between 1 and 10 years.

MSCI Europe: measures the performance of the mid and large cap segment in developed markets in Europe.

MSCI USA: measures the performance of the mid and large cap segment of the US market.

MSCI Emerging Markets: measures the performance of the mid and large cap segment of the emerging markets.

MSCI Japan: measures the performance of the mid and large cap segment of the Japanese market.

Use of the index

- -in determining risk levels/parameters;
- -for performance comparison purposes.

Level of deviation of the portfolio composition from the index

As the Fund is actively managed, it does not aim to invest in all constituents of the index, nor to invest in the same proportions as the constituents of the index.

Under normal market conditions, the expected tracking error of the sub-fund will be limited to moderate, namely between 0.5% and 3%. This measure is an estimate of the deviation of the sub-fund's performance from the performance of its index. The higher the tracking error, the greater the deviations from the index. The tracking error achieved depends in particular on market conditions (volatility and correlations between financial instruments) and may therefore deviate from the expected tracking error.

Index provider

Bloomberg, MSCI Limited

Each provider is, since Brexit, an entity benefiting from the transitional provision of Article 51, §5 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks for financial instruments and contracts or to measure the performance of investment funds and amending Directives 2008/48/EC and 2014/17/EU and Regulation (EU) No 596/2014

The Management Company and/or its delegates has/have in place robust written plans that cover the assumptions in which the benchmark is no longer published or in the event of substantial changes in its composition. The Board of Directors of the Fund will, on the basis of such plans and if deemed appropriate, select an alternative benchmark. Any change in the benchmark will be reflected in the Prospectus which will be amended accordingly. These plans are available, on request, at the registered office of the Management Company and/or its delegates.

### **3.1.8.** Policy followed during the year

During the year, the policy followed can be broken down into a few major trends, starting with the cautious positioning at the beginning of the period when the war in Ukraine had just broken out. The portfolio was then equity neutral and underweight in terms of duration. From a regional point of view, the strongest defensive position was on Europe, since this area was the most exposed to the energy and geopolitical shocks. Moreover, emerging equities were strong tactical convictions. Unfortunately, the emerging index suffered as a combined result of China's decision to maintain the "Zero-Covid" strategy, a reopening that initially benefited the domestic economy and geopolitical tensions with the United States at the end of the period. We have maintained our positive opinion with a view to a more homogeneous catch-up later which should benefit the whole region.

Our long-term convictions, such as healthcare and consumer goods, with their defensive bias, as well as the energy transition and circular economy, were also reflected in the portfolio. The portfolio benefited from the performance of such stocks as Merck, Xylem and Iberdrola. On the other hand, certain more cyclical consumer sector stocks had a negative impact, including LVMH.

In October, our analysis of investor sentiment, market psychology and technical conditions clearly showed signs of exaggerated and widespread pessimism. We saw this extreme configuration as a signal of a forthcoming market turnaround. As a result investment strategy became more constructive and we increased the allocation to risk-on assets within the portfolio, notably via equities and high

#### 3. INFORMATION ABOUT THE SUBFUND

#### 3.1. Management report of the sub-fund (continued)

yield bonds.

In terms of bonds, we were negative (underweight, short duration) as we anticipated a rise in interest rates. This underweight position partly protected our portfolios from the very rapid rate increase. With accelerated monetary tightening, yields increased during 2022. As a result, expected yields on bonds have become positive again, strongly contrasting with the previous situation. We therefore gradually increased the duration of the portfolio and were neutral at the end of the year.

We gradually took profits from our equity exposure at the end of the year in a context marked by slower growth on both sides of the Atlantic. While the US Federal reserve and the Swiss government were doing everything possible to avoid a contagion of stress spreading throughout their respective banking sectors, we focused our bond exposure on premium bonds and emerging debt while maintaining a neutral position on equities.

We inform you that no exceedance of the investment policy was recorded during the financial year.

### 3.1.9. Future policy

Future policy will take account of financial tensions that are symptomatic of monetary tightening cycles. The temporarily high uncertainty surrounding the banking sector reflects the difficult trade-off to be made to achieve at once financial stability and price stability, and central banks will adjust their policies in reaction to developments in this area.

In the case of complacent financial markets, we would be willing to reduce risk further. Moreover, a more severe market correction would likely open up new investment opportunities in the medium term. In the longer term, the portfolio will continue to invest in themes that are in line with future energy challenges and new consumption patterns.

#### 3.1.10. Risk Class

The synthetic risk indicator makes it possible to assess the level of risk of this fund in comparison with others. The level of risk is presented via a synthetic risk indicator on a scale from 1 (lowest risk) to 7 (highest risk). It is obtained by combining the market risk measure and the credit risk measure according to a methodology defined in Annex II of Commission Regulation 2017/653 of 8 March 2017 and is available, in its most recent version, in the Key Information Document.

The main limitations of the indicator are as follows: the risk indicator is calculated on the basis of historical data, which does not prejudge future developments. Consequently, the degree of risk may change over time. Even if the fund is in the lowest risk category, the investor may suffer losses as no category is completely risk free.

The compartment falls under class 3

## 3.6. Composition of the assets and key figures (continued)

THB	0,21%
ZAR	0,11%
MYR	0,09%
CZK	0,06%
CAD	0,05%
PLN	0,05%
TRY	0,04%
SGD	0,02%
NZD	0,02%
ILS	0,01%
RON	0,01%
HUF	0,01%
Total:	100,00%

The economic, geographical and currency allocations of the securities portfolio are based on the underlying securities (look through principle).

### 3.6.2. Change in the composition of assets of the subfund

(in the currency of the subfund)

	1st semester	2nd semester	Period
Purchases	35 440 486,02	41 494 122,30	76 934 608,32
Sales	61 206 041,91	44 056 126,41	105 262 168,32
Total 1	96 646 527,93	85 550 248,71	182 196 776,64
Subscriptions	17 737 000,84	19 923 229,00	37 660 229,84
Redemptions	42 434 530,40	21 083 248,15	63 517 778,55
Total 2	60 171 531,24	41 006 477,15	101 178 008,39
Reference average of the total net asset	138 083 173,59	122 380 415,16	130 231 794,37
<b>Rotation Percentage</b>	26,42%	36,40%	62,21%
<b>Corrected Rotation Percentage</b>	26,47%	36,34%	62,44%

A figure close to 0 % shows that transactions relating to securities or assets, excluding deposits and cash reserves, as applicable, have been carried out over a specific period, relating only to subscriptions and reimbursements. A negative percentage ind A detailed listed of the transactions which were made during the year can be consulted free of charge at Belfius Banque S.A. with its registered office at Place Rogier 11 - 1210 Brussels provides the financial services.

### 3.6.3. Increased rotation

The context of war which prevailed throughout the entire period, led to a sharp rise in volatility on financial markets as well as strong movements in equities in terms of style or sectors. This increased volatility has led us to significantly change the portfolio allocation in order to keep it in line with our market views. We also made some portfolio adjustments related to SFDR regulations, especially in 2023. These two factors resulted in a higher portfolio turnover rate.

# **3.6.4.** Table of liabilities relating to the positions on financial derivatives as at 31/03/2023 (in the currency of the subfund)

## 3.6.6. Performances

(expressed in percent)

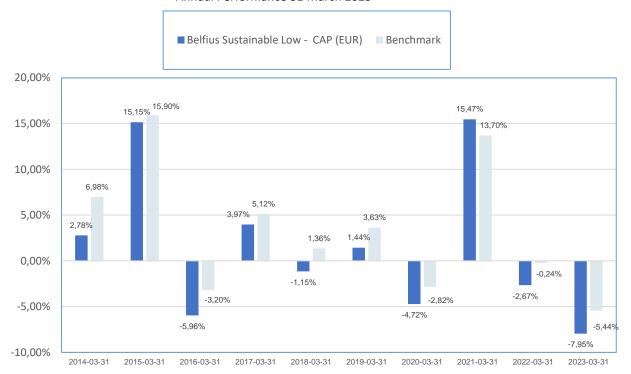

Class	CAP	1 year	3 year	5 year	10 year	Since the start
С	CAP	(7,95%)	1,14%	(0,00%)	1,35%	2,21%

### 3.6. Composition of the assets and key figures (continued)

#### Diagram in sticks

Class C (CAP) Year of creation: 2000

### Annual Performance 31 March 2023

Details of the benchmark are available under "Index(es) and Benchmark(s)".

These figures are historical yield data, which cannot provide any guarantee as to future yield and which do not take account of restructurings, nor of commissions and costs related to issues and redemptions of shares.

### **3.6.7.** Ongoing charges

(expressed in percent)

Ongoing charges		
Class C	BE0945314491	1,55%
Class C	BE0159412411	1,55%
Ongoing charges - impact on underlying funds		
Classe C / Klasse C	BE0945314491	0,11%
Classe C / Klasse C	BE0159412411	0,11%

The ongoing charges, as calculated in accordance with Regulation no. 583/2010 of the Commission of 1 July 2010 implementing Directive 2009/65/EC of the European Parliament and of the European Council, as regards key investor information and conditions to fulfil

whenproviding key investor information or a prospectus on a durable medium other than paper or by means of a website (hereinafter « Regulation 583/2010 »), are shown in the key investor information. The concept of « ongoing charges » includes all payments deducted

from the fund's assets where such deduction is required or permitted by the regulations, the articles of association or the prospectus. However, they do not include any performance fees, entry or exit charges directly paid by the investor, transaction fees, except those which

would be charged by the custodian bank, the management company, the administrative agent, the SICAV's managers or any other investment advisor. Fees linked to the subscription or redemption of underlying UCI units are also included into the ongoing charges.

### 3.6. Composition of the assets and key figures (continued)

Moreover, they do not include interest on loans and charges linked to holding derivative products (e.g. the margin calls). They are based on

the costs for the previous financial year and are a percentage of the average net assets for the period concerned. In some cases, they may be

expressed as a maximum amount to be charged or calculated on the basis of another one-year period, or they may be based on an estimate.

### Existence of fee sharing agreements:

Fee sharing does not affect the amount of the management fee paid by the Fund to the management company.

This management fee is subject to the limitations defined in the Articles of Association. These limitations can only be modified after approval by the General Meeting.

For the financial year under review, Belfius Investment Partners passed on 88% of the management fee.

# Belfius Sustainable Low

#### 3.7. Notes to the financial statements as at 31 March 2023

## 3.7.1. Fees commissions and recurring costs borne by the subfund

Fees, commissions and recurring costs borne by the subfund (Class C)

#### The fees:

- Management Fees at a maximum annual rate of 1.15%
- of the Administration provision at an annual rate of 0.10%
- of the Custody agent at a maximum annual rate of 0.04%
- other expenses (estimation) including the payment for Auditors, Directors and Individuals responsible for effective management at the annual rate of 0.10%

They are calculated and payable monthly on the basis of the average net asset value (excluding fees, commissions and costs accrued but not due) of the subfund's assets at the end of the month in question.

#### 3.7.2. Accrued liabilities (Balance VI C)

- The Management fee (Class C) 118 319,69 EUR
- The Administrative fee (Class C) 8 848,25 EUR
- The Administrative fee (general)
- 1 466,67 EUR
- The Custody agent fee (Class C) 3 086,61 EUR
- a provision for other annual overheads (supervisory authority's fee, auditor's fees, report costs, publication costs, etc.) 45 471,23 EUR

For a total of 177 192,45 EUR

## 3.7.3. Payment for auditors

Pursuant to article 3:65 §§ 2 and 4 of theCode of Companies and Associations : mention of the commissioner's emoluments. Amount of the emoluments (in EUR) Exclusive of VAT : 4 200

## 3.7.4. Maximum management fee of the underlying assets

#### 4. INFORMATION ABOUT THE SUBFUND

#### 4.1. Management report of the sub-fund

## 4.1.1. Launch date of the sub-fund and subscription price of the shares

The High sub-fund (formerly called Dexia Sustainable European Balanced High) was launched on 3 November 1998 (the High sub-fund has been activated since 1 July 2000 by transferring the assets of the BACOB Stimulus Ethipar sub-fund, a sub-fund of BACOB Investments) with a fixed net asset value per share of EUR 247.89.

Class Y shares are marketed from 26 October 2011.

Class R shares are marketed from 1 October 2018.

On 30/04/2020 (NAV date), investors in class N shares will become class C investors and class N shares will cease to exist permanently.

The meeting decided to abolish the share classes N, I, Y, Lock, R, R2 and Z as of 01/02/2022.

## 4.1.5. Stock exchange listing

Non applicable.

## 4.1.6. Aim and main outlines of the investment policy

Subfund objectives

The objective of the sub-fund is to enable shareholders to benefit from trends on the financial markets and to outperform the benchmark through a portfolio principally made up of Undertakings for Collective Investment (UCIs) selected by the Management Company on the basis of their expected return and socially responsible or sustainability criteria, which aim to offer a broad diversification (notably via equities and bonds of different countries and sectors). The sub-fund will focus on investments in equity UCIs.

The sub-fund aims to have a positive environmental and social impact in the long term by investing at least 85% of net assets in UCIs which have a sustainable investment objective and/or directly in sustainable investments.

#### **Fund policy**

## Permitted asset classes:

The assets of this sub-fund will be invested mainly in units of open-end UCIs.

The assets of the sub-fund may also be invested on an ancillary basis in the other asset categories mentioned in the Articles of Association attached to this document. For example, on an ancillary basis, the assets may be invested in shares, bonds, money market instruments, deposits and/or cash.

## Special strategy:

The sub-fund will invest mainly in units of Belgian or foreign UCIs managed by Candriam, which themselves invest mainly in:

- -bonds and/or similar transferable securities such as investment grade bonds, inflation-linked bonds, etc.
- -equities and/or equity-linked securities,
- -and/or cash and money market instruments.

#### 4. INFORMATION ABOUT THE SUBFUND

## 4.1. Management report of the sub-fund (continued)

#### Information on the sustainability of investments:

This sub-fund is classified under Article 9 of the SFDR Regulation, i.e. it has a sustainable investment objective.

ESG analysis is integrated in the selection and allocation of the underlying assets and covers the entire portfolio, excluding deposits, cash and index derivatives. Derivative counterparties may not be covered by ESG analysis.

## ESG analysis

In order to achieve its objective, the sub-fund invests at least 85% of the portfolio in UCIs with a sustainable investment objective and/or in direct sustainable investments.

ESG analysis for the investments of the underlying UCIs managed by Candriam with a sustainable investment objective and/or for the sustainable investments held in direct lines

#### Private issuers:

Companies are assessed from two distinct but related angles:

-analysis of the activities (products and services) of each company in order to assess how these activities respond to the major long-term challenges in terms of sustainable development, including in particular climate change through the impact of carbon emissions from products/services, resource and waste management, such as the use of water resources, the generation of waste and its degree of toxicity, and its recycling potential: and

-analysis of each company's key stakeholder management, assessing how companies integrate the interests of their stakeholders (customers, employees, suppliers, investors, society and the environment) into their strategies, operations and strategy setting. Thus, for example, the evaluation of relations with employees covers, among other things, their working conditions, training, retention and diversity policies in place. The assessment of investor relations evaluates the quality of the governance bodies in place, the company's practices in this area, but also its business ethics.

Companies apply good governance practices.

Based on this ESG analysis, a score is assigned to each company.

UCIs with a sustainable investment objective can have several types of ESG objectives, such as climate change, gender diversity, circular economy, ... or - for countries - the promotion of democratic change and sustainable environmental practices, ...

In particular, a mutual fund sub-fund or a mutual fund may aim to achieve a carbon footprint at least 30% lower than the benchmark.

The sub-fund focuses on investments in equity UCIs. However, their proportion may be a minority or be greatly reduced (potentially to a very small proportion of the assets) depending on the manager's expectations regarding the development of the financial markets and in order to reduce the risk for the investor.

In addition, the sub-fund may invest part of its net assets in UCIs which themselves follow specific strategies (such as commodities or other opportunities). However, these investments will always be a minority.

Both the UCIs held and the financial instruments of which they are composed may be denominated in any currency and may or may not be hedged against currency risk, depending on the manager's expectations regarding market trends. The financial instruments of these UCIs may be issued by issuers from different regions of the world, including emerging countries.

#### Sovereign issuers:

Countries are assessed on how they manage 4 key dimensions of sustainability: human capital, natural capital, social capital, economic capital.

Based on this ESG analysis, a score is assigned to each country.

The objective of having a positive long-term impact on the environment and society is evaluated through an ESG score calculated by Candriam. To achieve this sustainable objective, the weighted average ESG score of the sub-fund, including private and sovereign issuers, aims to be higher than the weighted average ESG score of the benchmark.

Based on the ESG approach adopted, the investment universe analysed is reduced by at least 20%, starting by eliminating from the investment universe analysed issuers with significant ESG risks.

UCIs not managed by Candriam, or whose management is delegated to third party managers, may have different ESG policies. The management company takes into account certain criteria in the selection of these funds in order to respect the ESG aspects described at the global level of each sub-fund.

#### 4. INFORMATION ABOUT THE SUBFUND

#### 4.1. Management report of the sub-fund (continued)

For more information on the SFDR policy and the Taxonomy of the sub-fund please refer to the appendices attached to this report.

#### Permitted transactions in derivatives:

The sub-fund may also use derivatives, such as options, futures, swaps, both on interest rates (fixed and variable rates, inflation, etc.) and on credit and currencies, and forward exchange transactions, in compliance with the legal rules in force, both for investment purposes and for hedging purposes. The investor should be aware that these types of derivatives are more volatile than the underlying products.

While the composition of the portfolio must comply with general rules and limits prescribed by law or the Articles of Association, a concentration of risk may occur in narrower geographical areas.

#### Characteristics of the bonds and debt securities:

The fixed or floating rate securities of the UCIs in position will be issued mainly by issuers deemed to be of good quality (investment grade: minimum BBB- and/or Baa3 at the time of acquisition) including governments, supranational institutions, the public sector and/or the private sector. Nevertheless, the sub-fund may hold, on an ancillary basis, UCIs investing in speculative bonds (rated below BBB-and/or Baa3 at acquisition).

The manager may vary the overall duration of the sub-fund within a range of 0 to 10 years depending on his expectations regarding the evolution of interest rates.

#### Description of the general strategy to hedge the currency risk:

The sub-fund does not intend to systematically hedge the currency risk exposure.

The investment policy ensures that the portfolio's risks are diversified. However, the evolution of the net asset value is uncertain as it is subject to the various types of risk mentioned below. This may result in a high volatility of its price.

#### 4. INFORMATION ABOUT THE SUBFUND

#### 4.1. Management report of the sub-fund (continued)

#### **4.1.7.** Index(es) and Benchmark(s)

#### Index name

25% Bloomberg Euro-Aggregate 1-10 Year Index (Total Return - including interest payments) + 30% MSCI Europe (Net Return - net dividends reinvested) + 30% MSCI USA (Net Return - net dividends reinvested) + 11.25% MSCI Emerging Markets (Net Return - net dividends reinvested) + 3.75% MSCI Japan (Net Return - net dividends disinvested)

#### **Index definition**

Bloomberg Euro-Aggregate 1-10 Year Index: measures the performance of investment grade bonds (minimum BBB- and/or Baa3) denominated in EUR, with a maturity between 1 and 10 years.

MSCI Europe: measures the performance of the mid and large cap segment in developed markets in Europe.

MSCI USA: measures the performance of the mid and large cap segment of the US market.

MSCI Emerging Markets: measures the performance of the mid and large cap segment of the emerging markets.

MSCI Japan: measures the performance of the mid and large cap segment of the Japanese market.

#### Use of the index

- -in determining risk levels/parameters;
- -for performance comparison purposes.

Level of deviation of the portfolio composition from the index

As the Fund is actively managed, it does not aim to invest in all constituents of the index, nor to invest in the same proportions as the constituents of the index.

Under normal market conditions, the expected tracking error of the sub-fund will be limited to moderate, namely between 0.5% and 3%. This measure is an estimate of the deviation of the sub-fund's performance from the performance of its index. The higher the tracking error, the greater the deviations from the index. The tracking error achieved depends in particular on market conditions (volatility and correlations between financial instruments) and may therefore deviate from the expected tracking error.

#### 4.1.8. Policy followed during the year

During the year, the policy followed can be broken down into a few major trends, starting with the cautious positioning at the beginning of the period when the war in Ukraine had just broken out. The portfolio was then equity neutral and underweight in terms of duration. From a regional point of view, the strongest defensive position was on Europe, since this area was the most exposed to the energy and geopolitical shocks. Moreover, emerging equities were strong tactical convictions. Unfortunately, the emerging index suffered as a combined result of China's decision to maintain the "Zero-Covid" strategy, a reopening that initially benefited the domestic economy and geopolitical tensions with the United States at the end of the period. We have maintained our positive opinion with a view to a more homogeneous catch-up later which should benefit the whole region.

Our long-term convictions, such as healthcare and consumer goods, with their defensive bias, as well as the energy transition and circular economy, were also reflected in the portfolio. The portfolio benefited from the performance of such stocks as Merck, Xylem and Iberdrola. On the other hand, certain more cyclical consumer sector stocks had a negative impact, including LVMH.

In October, our analysis of investor sentiment, market psychology and technical conditions clearly showed signs of exaggerated and widespread pessimism. We saw this extreme configuration as a signal of a forthcoming market turnaround. As a result investment strategy became more constructive and we increased the allocation to risk-on assets within the portfolio, notably via equities and high yield bonds.

In terms of bonds, we were negative (underweight, short duration) as we anticipated a rise in interest rates. This underweight position partly protected our portfolios from the very rapid rate increase. With accelerated monetary tightening, yields increased during 2022. As a result, expected yields on bonds have become positive again, strongly contrasting with the previous situation. We therefore gradually increased the duration of the portfolio and were neutral at the end of the year.

We gradually took profits from our equity exposure at the end of the year in a context marked by slower growth on both sides of the Atlantic. While the US Federal reserve and the Swiss government were doing everything possible to avoid a contagion of stress spreading throughout their respective banking sectors, we focused our bond exposure on premium bonds and emerging debt while maintaining a neutral position on equities.

We inform you that no exceedance of the investment policy was recorded during the financial year.

#### 4. INFORMATION ABOUT THE SUBFUND

#### 4.1. Management report of the sub-fund (continued)

#### 4.1.9. Future policy

Future policy will take account of financial tensions that are symptomatic of monetary tightening cycles. The temporarily high uncertainty surrounding the banking sector reflects the difficult trade-off to be made to achieve at once financial stability and price stability, and central banks will adjust their policies in reaction to developments in this area.

In the case of complacent financial markets, we would be willing to reduce risk further. Moreover, a more severe market correction would likely open up new investment opportunities in the medium term. In the longer term, the portfolio will continue to invest in themes that are in line with future energy challenges and new consumption patterns.

#### 4.1.10. Risk Class

L'indicateur synthétique de risque permet d'apprécier le niveau de risque de ce fonds par rapport à d'autres. Le niveau de risque est présenté via un indicateur synthétique de risque sur une échelle allant de 1 (risque le plus faible) à 7 (risque le plus élevé). Il est obtenu en combinant la mesure du risque de marché et la mesure du risque de crédit selon une méthodologie définie dans l'annexe II du Règlement 2017/653 de la Commission du 8 mars 2017 et est disponible, dans sa version la plus récente, dans le document d'informations clés.

Les principales limites de l'indicateur sont les suivantes : l'indicateur de risque est calculé à partir des données historiques, qui ne préjugent en rien de l'évolution future. En conséquence, le degré de risque pourra évoluer dans le temps. Même si le fonds se situe dans la catégorie de risque la plus basse, l'investisseur peut subir des pertes car aucune catégorie n'est totalement exempte de risque.

The compartment falls under class 3

The economic, geographical and currency allocations of the securities portfolio are based on the underlying securities (look through principle).

## **4.6.2.** Change in the composition of assets of the subfund

(in the currency of the subfund)

	1st semester	2nd semester	Period
Purchases	112 018 534,45	125 477 548,19	237 496 082,64
Sales	76 976 526,34	88 945 379,42	165 921 905,76
Total 1	188 995 060,79	214 422 927,61	403 417 988,40
Subscriptions	50 841 418,47	53 366 050,46	104 207 468,93
Redemptions	12 135 382,28	13 751 315,42	25 886 697,70

## 4.6. Composition of the assets and key figures (continued)

Total 2	62 976 800,75	67 117 365,88	130 094 166,63
Reference average of the total net asset	221 712 838,83	243 512 548,17	232 612 693,50
<b>Rotation Percentage</b>	56,84%	60,49%	117,50%
Corrected Rotation Percentage	56,63%	60,10%	116,78%

A figure close to 0 % shows that transactions relating to securities or assets, excluding deposits and cash reserves, as applicable, have been carried out over a specific period, relating only to subscriptions and reimbursements. A negative percentage ind A detailed listed of the transactions which were made during the year can be consulted free of charge at Belfius Banque S.A. with its registered office at Place Rogier 11 - 1210 Brussels provides the financial services.

#### 4.6.3. Increased rotation

The context of war which prevailed throughout the entire period, led to a sharp rise in volatility on financial markets as well as strong movements in equities in terms of style or sectors. This increased volatility has led us to significantly change the portfolio allocation in order to keep it in line with our market views. We also made some portfolio adjustments related to SFDR regulations, especially in 2023. These two factors resulted in a higher portfolio turnover rate.

# **4.6.4.** Table of liabilities relating to the positions on financial derivatives as at 31/03/2023 (in the currency of the subfund)

#### 4.6. Composition of the assets and key figures (continued)

## 4.6.7. Ongoing charges

(expressed in percent)

Ongoing charges		
Class C	BE0945312479	2,02%
Class C	BE0169199313	2,02%
Ongoing charges - impact on underlying fur	nds	
Classe C / Klasse C	BE0945312479	0,14%
Classe C / Klasse C	BE0169199313	0,14%

The ongoing charges, as calculated in accordance with Regulation no. 583/2010 of the Commission of 1 July 2010 implementing Directive 2009/65/EC of the European Parliament and of the European Council, as regards key investor information and conditions to fulfil whenproviding key investor information or a prospectus on a durable medium other than paper or by means of a website (hereinafter « Regulation 583/2010 »), are shown in the key investor information. The concept of « ongoing charges » includes all payments deducted from the fund's assets where such deduction is required or permitted by the regulations, the articles of association or the prospectus. However, they do not include any performance fees, entry or exit charges directly paid by the investor, transaction fees, except those which would be charged by the custodian bank, the management company, the administrative agent, the SICAV's managers or any other investment advisor. Fees linked to the subscription or redemption of underlying UCI units are also included into the ongoing charges. Moreover, they do not include interest on loans and charges linked to holding derivative products (e.g. the margin calls). They are based on the costs for the previous financial year and are a percentage of the average net assets for the period concerned. In some cases, they may be expressed as a maximum amount to be charged or calculated on the basis of another one-year period, or they may be based on an estimate.

#### Existence of fee sharing agreements:

Fee sharing does not affect the amount of the management fee paid by the Fund to the management company.

This management fee is subject to the limitations defined in the Articles of Association. These limitations can only be modified after approval by the General Meeting.

For the financial year under review, Belfius Investment Partners passed on 88% of the management fee.

## 4.7. Notes to the financial statements as at 31 March 2023

## 4.7.1. Fees commissions and recurring costs borne by the subfund

Fees, commissions and recurring costs borne by the subfund (Class C)

The fees:

- Management Fees at a maximum annual rate of 1.55%
- of the Administration provision at an annual rate of 0.10%
- of the Custody agent at a maximum annual rate of 0.04%
- other expenses (estimation) including the payment for Auditors, Directors and Individuals responsible for effective management at the annual rate of 0.10%

They are calculated and payable monthly on the basis of the average net asset value (excluding fees, commissions and costs accrued but not due) of the subfund's assets at the end of the month in question.

## 4.7.2. Accrued liabilities (Balance VI C)

- The Management fee (Class C) 347 055,61 EUR
- The Administrative fee (Class C) 19 255,96 EUR
- The Administrative fee (general)

1 466,67 EUR

- The Custody agent fee (Class C) 6 717,20 EUR
- a provision for other annual overheads (supervisory authority's fee, auditor's fees, report costs, publication costs, etc.) 92 742,12 EUR

For a total of 467 237,56 EUR

# 4.7.3. Payment for auditors

Pursuant to article 3:65 §§ 2 and 4 of the Code of Companies and Associations : mention of the commissioner's emoluments.

Amount of the emoluments (in EUR) Exclusive of VAT: 4 200

Belfius Sustainable

# UNAUDITED SFDR ANNEXES & TRANSPARENCY CODE

#### Annex V

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

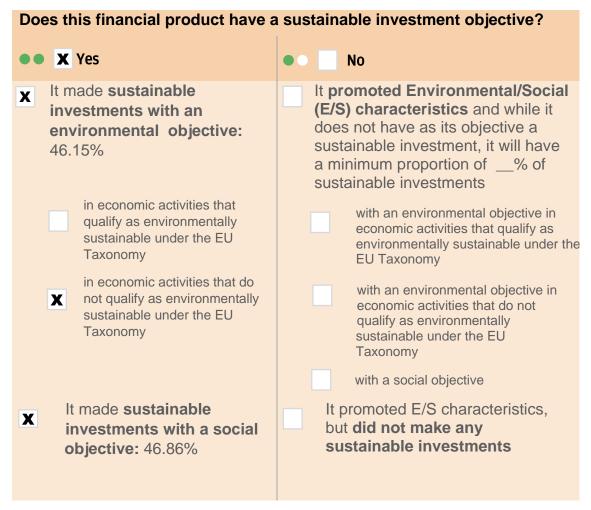

Product name: Belfius Sustainable - Medium Legal entity identifier: 549300Y4LRSY24UPWM33

# Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

# Sustainable investment objective

# To what extent was the sustainable investment objective of this financial product met?

Achievement of the Sustainable Investing Goals was measured using the following sustainability indicator:

- Carbon footprint: the Sub-Fund aimed to have a carbon footprint at least 25% lower than the carbon footprint of the fund's benchmark index.

The Sub-Fund is actively managed and the investment approach involves a reference to a benchmark index. The selected benchmark did not explicitly take sustainability objectives into account. There is no EU benchmark on climate transition or any index aligned with the Paris Agreement or any other sustainable benchmark that takes full account of the sustainability objectives and investment strategy as described in the prospectus.

Nevertheless, the benchmark was used in the comparison of sustainability indicators. The Sub-Fund aims to have a carbon footprint that is at least 25% lower than the carbon footprint of the Sub-Fund's benchmark index.

The Sub-Fund's objective of reducing greenhouse gas emissions relative to its benchmark is a first step towards the objectives of the Paris Agreement. Other measures will be taken later to reduce CO2 emissions in order to reach the Paris Agreement.

In addition, the following indicator was monitored either directly for investments in direct lines, or indirectly in the underlying UCITS/UCIs managed by Candriam in order to:

- ensure that there are no investments in issuers that violate the OECD Guidelines for Multinational Enterprises or the United Nations Global Compact,
- ensure that there are no investments in companies that appear on Candriam's SRI exclusion list due to the application of Candriam's Exclusion Policy;
- ensure that there are no sovereign investments in countries on Candriam's list of oppressive regimes;
- ensure that there are no sovereign investments in countries considered "unfree" by Freedom House.

# How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager took into account the ESG assessments of issuers, produced by Candriam's team of ESG analysts.

For companies, these assessments are based on the analysis of the company's interactions with its main stakeholders and on the analysis of its business activities and their impact, positive or negative, on the main challenges of sustainable development such as climate change and resource depletion. Additionally, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investing also assesses investments for compliance with the 'do no harm' principle, a sustainable investment objective and good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to achieve the minimum proportion of sustainable investments defined in the prospectus (minimum 85%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

## ...and compared to previous periods?

Not applicable as no data is available for previous periods.

# How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do no significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

# \_ How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

- 1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:
- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;.
- company's interations with key stakeholders.
- 2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.
- 3. Engagement activities with companies, through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

- 1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.
- 2. Negative Country Screening, which includes the following:
- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

# \_ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

# How did this financial product consider principal adverse impacts on sustainability factors?

At Sub-Fund level, the main negative impacts (PAI) on sustainability factors have been taken into account by one or more means (https://www.candriam.com/fr-be/private/sfdr---belfius/ > SFDR declarations – Funds > Policy on the main negative impacts at product level):

- Engagement & Voting: in order to avoid and/or reduce the negative impact on the sustainable objectives, the Sub-Fund has also taken into account the negative impacts in its interactions with companies, through dialogue and voting. Candriam has prioritized its engagement and voting activities based on an assessment of the most material and relevant ESG challenges facing industries and issuers, considering both financial and societal impacts/ stakeholders. Therefore, the level of engagement with each company within a single product may vary and is subject to Candriam's prioritization methodology.

## - Dialog:

The climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities for climate engagement on the business side are identified taking into account:

- issuers with a low transition profile (proprietary transition risk model), and/or still very carbon-intensive (Scope 1-2) or with significant Scope 3 emissions,
- issuers in the financial sectors still largely exposed to fossil fuels and playing a key role in financing the transition
- relative exposure of the managed portfolios to the above issuers.

Our objective is obviously to encourage companies to report publicly on their alignment on a 1.5° trajectory and to support such alignment. Beyond any Net Zero commitment and absolute disclosure of Scope1-2-3 emissions, we will therefore encourage them to provide information on how the short/medium term targets are aligned with the scientifically recognized 1.5° trajectory. In particular, we expect issuers to explain how their strategy and investment plan serve their decarbonization commitment. We generally combine individual dialogue and collaborative dialogue. As in the previous year, we continue to support and actively participate in several collaborative initiatives such as Climate Action 100+. These initiatives not only contribute to increasing the level of transparency on greenhouse gas emissions and the associated strategy, but also to obtain a fundamental leverage effect to support strategic changes. The results of these engagements are detailed in our annual Engagement and Voting Report, available on our public website (https://www.candriam.com/en/professional/insight-overview/publications/#sripublications).

Given the geopolitical context and the observed increase in inequalities, several commitments have also been carried out in terms of the protection of fundamental human rights at the level of the direct or indirect workforce (due diligence of the supply chain) (PAI10, PAI11). We also conducted a dedicated post-covid direct engagement campaign aimed at investigating the impact of stakeholder relations and the changes now embedded as the "new normal course" of business for Candriam beneficiary companies. In the same vein, human capital management is an aspect that we address in most of our discussions with companies. We continue to support Workforce Disclosure Initiative by advocating for better access to reliable, relevant and comparable data on the direct and indirect workforce of companies.

#### - Voting:

Candriam's approach to corporate governance is based on internationally recognized standards, in particular the principles laid down by the OECD and by the International Corporate Governance Network (ICGN).

In this regard, Candriam exercised its voting rights when they were available on the positions in the portfolio. Shareholder rights, shareholder equality, board accountability, transparency and integrity of financial statements are key pillars of our voting policy. Directors' compensation and election focus most of our votes against management. Indeed, we require companies to respect the principle of performance-based remuneration and will show our disagreement as soon as we deem the level of remuneration excessive or the conditions of allocation not transparent or demanding enough. Likewise, we expect companies to meet our minimum independence requirements: on boards that do not meet this requirement, we oppose the (re)election of any non-independent director, with the exception of the CEO. Diversity (PAI13) and the level of expertise of the Board are of course also taken into account in these votes.

In addition, Candriam always considers the relevance, consistency and feasibility of the measures sponsored by any ESG resolution before voting.

In the best interest of its clients, Candriam takes into account the internal ESG opinion on the companies held, but also any results of engagement with them, in its voting choices.

As part of Candriam's voting policy, specific guidelines are applied for a range of environmental (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social (e.g. diversity, gender pay gap (PAI12), human rights (PAI10, PAI11)) and governance-related management and shareholder resolutions. Specifically, Candriam welcomes the introduction of management-sponsored "Say-on-Climate" resolutions. Candriam has built a detailed framework to apply to each Say-on-Climate resolution, which assesses the rigor and alignment of the company's transition strategy with a net zero emissions 2050 trajectory. As a result, most of they did not get our support during the period.

- Exclusion: Candriam's negative screening of companies or countries was aimed at avoiding investments in harmful activities or practices and may lead to exclusions linked to the negative impact of companies or issuers.
- Monitoring: calculation and evaluation of the main negative impact indicators, including reporting at Sub-Fund level. Some of these indicators may have explicit objectives and may be used to measure the achievement of the sub-fund's sustainable investment objective. See below the results of the indicators of this Sub-fund:

Indicators	Results		Coverage ratio	
	Covered Portfolio Involved	Portfolio Involved	Portfolio Covered	Eligible Portfolio Covered
PAI 1. Greenhouse Gas (GHG) emissions - scope 1 (tons)	45260.6563759 956			
PAI 1 scope 2	18851.3476334 429			
PAI 1 M1 - Carbon Emissions Total	64112.0040094 385

Utilities	4.12
Real Estate	2.44
Energy	0.46

# To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

0% were sustainable investments with an environmental objective aligned with the EU taxonomy at the year-end date and representative of the reference period.

 Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>1</sup>

Yes	
In fossil gas	In nuclear energy
<b>X</b> No	

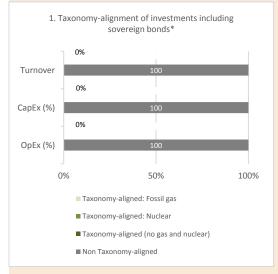

Enabling activities
directly enable other
activities to make a
substantial
contribution to an
environmental
objective.
Transitional
activities are

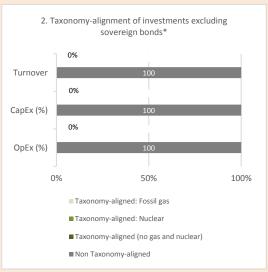

activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100.00% of the total investment.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

# What was the share of investments made in transitional and enabling activities?

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on transitional and enabling activities, because very few companies globally provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

Not applicable as no data for the previous period is available.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

# What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund held a 46.15% share in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed, to date, only two of the six objectives have entered into force in 2022 and very few companies at the global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

# What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 46.86%

# What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included in the "Non-sustainable" section are present in the Sub-Fund for 6.99% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposits, reverse repos necessary for the management of the Sub-Fund's liquidity following subscriptions/redemptions and/or resulting from the Sub-Fund's market exposure decision.
- Investments in issuers considered to be sustainable investments at the time of investment and which are no longer fully aligned with Candriam's sustainable investment criteria. These investments are intended to be sold.
- Non-single name derivatives used for efficient portfolio management purposes and/or for hedging purposes and/or temporarily following subscriptions/redemptions.

# What actions have been taken to attain the sustainable investment objective during the reference period?

The SICAV Belfius Sustainable has the sustainable investment objective of having a carbon footprint 25% lower than that of its benchmark index. The SICAV is made up of 3 sub-funds: Belfius Sustainable Low, Medium and High. It invests in underlying funds and direct lines. Underlying funds and direct lines have been selected in order to respect the sustainable investment objective of the portfolio as planned.

To materialize the consideration of this objective and of the issues related to climate change, the carbon footprint of the underlyings has been measured.

As of 03/31/2023, the carbon footprint of the Belfius Sustainable Medium portfolio is 37.34 tCO2-eq / million euros invested, compared to 74.22 tCO2-eq / million euros invested for the portfolio's benchmark index. The overall Belfius Sustainable Medium ESG score is 56.6 compared to 53.7 for the portfolio's benchmark index.

In order to respect its sustainable investment objective, the SICAV invests in a majority of underlying article 9 funds and has initiated / strengthened positions in issuers with a positive ESG profile, based on Candriam's independent assessment at during the reference period.

These titles are chosen meticulously and mainly distributed according to several themes, including (1) Climate change and resource depletion, (2) Demographic evolution and consumption, (3) Digitalization and innovation, (4) Health care and (5) Real estate and infrastructure.

The thematic of climate change and resource depletion includes positions in the following names due to their focus on the energy transition to a low carbon environment: Iberdrola and Schneider Electric.

Schneider Electric's activity is strongly oriented towards the challenges of energy transition and Iberdrola is one of the most advanced community service players on the green energy production front.

In the real estate and infrastructure thematic basket, we hold positions in Kone Oyj, Otis Worldwide Corp and Equinix Inc. Equinix is the global leader in digital infrastructure and has an enduring goal to be the first datacenter to use only renewable energies. They are now at 92% of their goal.

The SICAV also sold securities whose issuers no longer met the required conditions, including Atlas Copco in April 2022 and Vinci in October 2022.

In March 2022, the ESG team issued an ESG alert on Atlas Copco due to its exposure to the Russian nuclear weapons program. Candriam's ESG team takes a zero-tolerance stance on weapons and related services, including dual-use components for military purposes in Russia. This company represented significantly high risks that we did not consider acceptable for our ESG/Article 9 funds.

In October 2022, we sold Vinci SA, whose ESG score slipped below the acceptable limit for the SICAV. Our analysts revealed a changing score from positive to negative for their stakeholder management. The title was thus transferred.

# How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a sustainable benchmark to meet sustainable investing objectives.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

#### Annex V

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

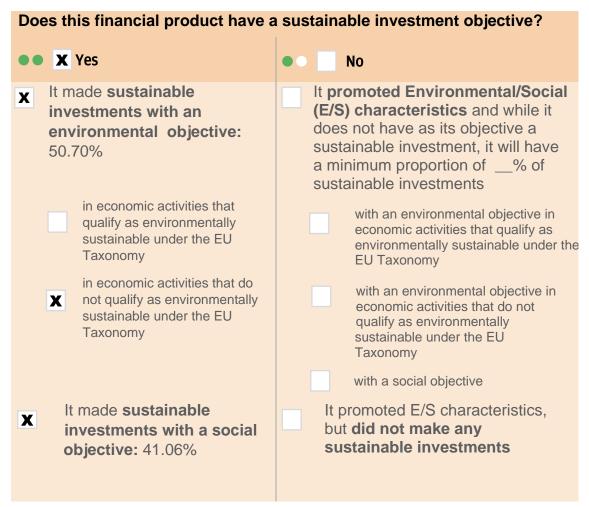

Product name: Belfius Sustainable - Low Legal entity identifier: 5493005L3JHWHV3EXF77

# Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

# Sustainable investment objective

# To what extent was the sustainable investment objective of this financial product met?

Achievement of the Sustainable Investing Goals was measured using the following sustainability indicator:

- Carbon footprint: the Sub-Fund aimed to have a carbon footprint at least 25% lower than the carbon footprint of the fund's benchmark index.

The Sub-Fund is actively managed and the investment approach involves a reference to a benchmark index. The selected benchmark did not explicitly take sustainability objectives into account. There is no EU benchmark on climate transition or any index aligned with the Paris Agreement or any other sustainable benchmark that takes full account of the sustainability objectives and investment strategy as described in the prospectus.

Nevertheless, the benchmark was used in the comparison of sustainability indicators. The Sub-Fund aims to have a carbon footprint that is at least 25% lower than the carbon footprint of the Sub-Fund's benchmark index.

The Sub-Fund's objective of reducing greenhouse gas emissions relative to its benchmark is a first step towards the objectives of the Paris Agreement. Other measures will be taken later to reduce CO2 emissions in order to reach the Paris Agreement.

In addition, the following indicator was monitored either directly for investments in direct lines, or indirectly in the underlying UCITS/UCIs managed by Candriam in order to:

- ensure that there are no investments in issuers that violate the OECD Guidelines for Multinational Enterprises or the United Nations Global Compact,
- ensure that there are no investments in companies that appear on Candriam's SRI exclusion list due to the application of Candriam's Exclusion Policy;
- ensure that there are no sovereign investments in countries on Candriam's list of oppressive regimes;
- ensure that there are no sovereign investments in countries considered "unfree" by Freedom House.

# How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager took into account the ESG assessments of issuers, produced by Candriam's team of ESG analysts.

For companies, these assessments are based on the analysis of the company's interactions with its main stakeholders and on the analysis of its business activities and their impact, positive or negative, on the main challenges of sustainable development such as climate change and resource depletion. Additionally, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investing also assesses investments for compliance with the 'do no harm' principle, a sustainable investment objective and good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to achieve the minimum proportion of sustainable investments defined in the prospectus (minimum 85%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

## ...and compared to previous periods?

Not applicable as no data is available for previous periods.

## How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do no significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

### \_ How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

- 1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:
- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;.
- company's interations with key stakeholders.
- 2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.
- 3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

- 1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.
- 2. Negative Country Screening, which includes the following:
- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

### \_ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

### How did this financial product consider principal adverse impacts on sustainability factors?

At Sub-Fund level, the main negative impacts (PAI) on sustainability factors have been taken into account by one or more means (https://www.candriam.com/fr-be/private/sfdr---belfius/ > SFDR declarations – Funds > Policy on the main negative impacts at product level):

- Engagement & Voting: in order to avoid and/or reduce the negative impact on the sustainable objectives, the Sub-Fund has also taken into account the negative impacts in its interactions with companies, through dialogue and voting. Candriam has prioritized its engagement and voting activities based on an assessment of the most material and relevant ESG challenges facing industries and issuers, considering both financial and societal impacts/ stakeholders. Therefore, the level of engagement with each company within a single product may vary and is subject to Candriam's prioritization methodology.

#### - Dialog:

The climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities for climate engagement on the business side are identified taking into account:

- issuers with a low transition profile (proprietary transition risk model), and/or still very carbon-intensive (Scope 1-2) or with significant Scope 3 emissions,
- issuers in the financial sectors still largely exposed to fossil fuels and playing a key role in financing the transition
- relative exposure of the managed portfolios to the above issuers.

Our objective is obviously to encourage companies to report publicly on their alignment on a 1.5° trajectory and to support such alignment. Beyond any Net Zero commitment and absolute disclosure of Scope1-2-3 emissions, we will therefore encourage them to provide information on how the short/medium term targets are aligned with the scientifically recognized 1.5° trajectory. In particular, we expect issuers to explain how their strategy and investment plan serve their decarbonization commitment. We generally combine individual dialogue and collaborative dialogue. As in the previous year, we continue to support and actively participate in several collaborative initiatives such as Climate Action 100+. These initiatives not only contribute to increasing the level of transparency on greenhouse gas emissions and the associated strategy, but also to obtain a fundamental leverage effect to support strategic changes. The results of these engagements are detailed in our annual Engagement and Voting Report, available on our public website (https://www.candriam.com/en/professional/insight-overview/publications/#sripublications).

Given the geopolitical context and the observed increase in inequalities, several commitments have also been carried out in terms of the protection of fundamental human rights at the level of the direct or indirect workforce (due diligence of the supply chain) (PAI10, PAI11). We also conducted a dedicated post-covid direct engagement campaign aimed at investigating the impact of stakeholder relations and the changes now embedded as the "new normal course" of business for Candriam beneficiary companies. In the same vein, human capital management is an aspect that we address in most of our discussions with companies. We continue to support Workforce Disclosure Initiative by advocating for better access to reliable, relevant and comparable data on the direct and indirect workforce of companies.

#### - Voting:

Candriam's approach to corporate governance is based on internationally recognized standards, in particular the principles laid down by the OECD and by the International Corporate Governance Network (ICGN).

In this regard, Candriam exercised its voting rights when they were available on the positions in the portfolio. Shareholder rights, shareholder equality, board accountability, transparency and integrity of financial statements are key pillars of our voting policy. Directors' compensation and election focus most of our votes against management. Indeed, we require companies to respect the principle of performance-based remuneration and will show our disagreement as soon as we deem the level of remuneration excessive or the conditions of allocation not transparent or demanding enough. Likewise, we expect companies to meet our minimum independence requirements: on boards that do not meet this requirement, we oppose the (re)election of any non-independent director, with the exception of the CEO. Diversity (PAI13) and the level of expertise of the Board are of course also taken into account in these votes.

In addition, Candriam always considers the relevance, consistency and feasibility of the measures sponsored by any ESG resolution before voting.

In the best interest of its clients, Candriam takes into account the internal ESG opinion on the companies held, but also any results of engagement with them, in its voting choices.

As part of Candriam's voting policy, specific guidelines are applied for a range of environmental (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social (e.g. diversity, gender pay gap (PAI12), human rights (PAI10, PAI11)) and governance-related management and shareholder resolutions. Specifically, Candriam welcomes the introduction of management-sponsored "Say-on-Climate" resolutions. Candriam has built a detailed framework to apply to each Say-on-Climate resolution, which assesses the rigor and alignment of the company's transition strategy with a net zero emissions 2050 trajectory. As a result, most of they did not get our support during the period.

- Exclusion: Candriam's negative screening of companies or countries was aimed at avoiding investments in harmful activities or practices and may lead to exclusions linked to the negative impact of companies or issuers.
- Monitoring: calculation and evaluation of the main negative impact indicators, including reporting at Sub-Fund level. Some of these indicators may have explicit objectives and may be used to measure the achievement of the sub-fund's sustainable investment objective. See below the results of the indicators of this Sub-fund:

Indicators	Results		Coverage ratio	
	Covered Portfolio Involved	Portfolio Involved	Portfolio Covered	Eligible Portfolio Covered
PAI 1. Greenhouse Gas (GHG) emissions - scope 1 (tons)	1726.46047668 704		90,42	96,23

### What was the proportion of sustainability-related investments?

### What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#### In which economic sectors were the investments made?

Sector	% Assets		
Financials	19.10		
Technology	17.94		
Health	14.62		
Industrials	11.57		
Cyclical Consumption	10.91		
Non Cyclical	8.32		

Telecom	5.93
Materials	5.05
Utilities	3.70
Real Estate	2.42
Others	0.44

### To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

0% were sustainable investments with an environmental objective aligned with the EU taxonomy at the year-end date and representative of the reference period.

 Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>1</sup>

Yes	
In fossil gas	In nuclear energy
<b>X</b> No	

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon

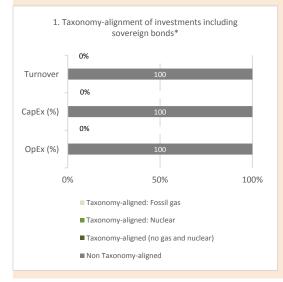

alternatives are not yet available and

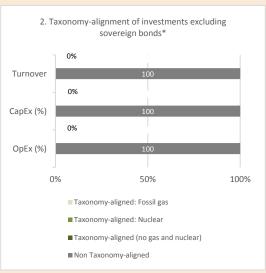

that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100.00% of the total investment.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What was the share of investments made in transitional and enabling activities?

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on transitional and enabling activities, because very few companies globally provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

Not applicable as no data for the previous period is available.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund held a 50.70% share in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed, to date, only two of the six objectives have entered into force in 2022 and very few companies at the global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

### What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 41.06%

### What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included in the "Non-sustainable" section are present in the Sub-Fund for 8.24% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposits, reverse repos necessary for the management of the Sub-Fund's liquidity following subscriptions/redemptions and/or resulting from the Sub-Fund's market exposure decision.
- Investments in issuers considered to be sustainable investments at the time of investment and which are no longer fully aligned with Candriam's sustainable investment criteria. These investments are intended to be sold.
- Non-single name derivatives used for efficient portfolio management purposes and/or for hedging purposes and/or temporarily following subscriptions/redemptions.

### What actions have been taken to attain the sustainable investment objective during the reference period?

The SICAV Belfius Sustainable has the sustainable investment objective of having a carbon footprint 25% lower than that of its benchmark index. The SICAV is made up of 3 sub-funds: Belfius Sustainable Low, Medium and High. It invests in underlying funds and direct lines. Underlying funds and direct lines have been selected in order to respect the sustainable investment objective of the portfolio as planned.

To materialize the consideration of this objective and of the issues related to climate change, the carbon footprint of the underlyings has been measured.

As of 03/31/2023, the carbon footprint of the Belfius Sustainable Low portfolio is 36.14 tCO2-eq / million euros invested, compared to 73.53 tCO2-eq / million euros invested for the portfolio's benchmark index. The overall ESG score of Belfius Sustainable Low is 56.9 compared to 54.5 for the portfolio's benchmark index.

In order to respect its sustainable investment objective, the SICAV invests in a majority of underlying article 9 funds and has initiated / strengthened positions in issuers with a positive ESG profile, based on Candriam's independent assessment at during the reference period.

These titles are chosen meticulously and mainly distributed according to several themes, including (1) Climate change and resource depletion, (2) Demographic evolution and consumption, (3) Digitalization and innovation, (4) Health care and (5) Real estate and infrastructure.

The thematic of climate change and resource depletion includes positions in the following names due to their focus on the energy transition to a low carbon environment: Iberdrola and Schneider Electric.

Schneider Electric's activity is strongly oriented towards the challenges of energy transition and Iberdrola is one of the most advanced community service players on the green energy production front.

In the real estate and infrastructure thematic basket, we hold positions in Kone Oyj, Otis Worldwide Corp and Equinix Inc. Equinix is the global leader in digital infrastructure and has an enduring goal to be the first datacenter to use only renewable energies. They are now at 92% of their goal.

The SICAV also sold securities whose issuers no longer met the required conditions, including Atlas Copco in April 2022 and Vinci in October 2022.

In March 2022, the ESG team issued an ESG alert on Atlas Copco due to its exposure to the Russian nuclear weapons program. Candriam's ESG team takes a zero-tolerance stance on weapons and related services, including dual-use components for military purposes in Russia. This company represented significantly high risks that we did not consider acceptable for our ESG/Article 9 funds.

In October 2022, we sold Vinci SA, whose ESG score slipped below the acceptable limit for the SICAV. Our analysts revealed a changing score from positive to negative for their stakeholder management. The title was thus transferred.

### How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a sustainable benchmark to meet sustainable investing objectives.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

#### Annex V

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

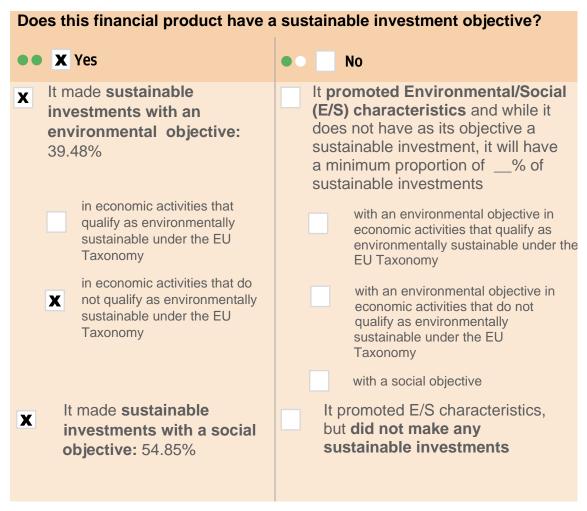

Product name: Belfius Sustainable - High Legal entity identifier: 549300DP3OV8HOLQ5V57

### Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

### Sustainable investment objective

### To what extent was the sustainable investment objective of this financial product met?

Achievement of the Sustainable Investing Goals was measured using the following sustainability indicator:

- Carbon footprint: the Sub-Fund aimed to have a carbon footprint at least 25% lower than the carbon footprint of the fund's benchmark index.

The Sub-Fund is actively managed and the investment approach involves a reference to a benchmark index. The selected benchmark did not explicitly take sustainability objectives into account. There is no EU benchmark on climate transition or any index aligned with the Paris Agreement or any other sustainable benchmark that takes full account of the sustainability objectives and investment strategy as described in the prospectus.

Nevertheless, the benchmark was used in the comparison of sustainability indicators. The Sub-Fund aims to have a carbon footprint that is at least 25% lower than the carbon footprint of the Sub-Fund's benchmark index.

The Sub-Fund's objective of reducing greenhouse gas emissions relative to its benchmark is a first step towards the objectives of the Paris Agreement. Other measures will be taken later to reduce CO2 emissions in order to reach the Paris Agreement.

In addition, the following indicator was monitored either directly for investments in direct lines, or indirectly in the underlying UCITS/UCIs managed by Candriam in order to:

- ensure that there are no investments in issuers that violate the OECD Guidelines for Multinational Enterprises or the United Nations Global Compact,
- ensure that there are no investments in companies that appear on Candriam's SRI exclusion list due to the application of Candriam's Exclusion Policy;
- ensure that there are no sovereign investments in countries on Candriam's list of oppressive regimes;
- ensure that there are no sovereign investments in countries considered "unfree" by Freedom House.

### How did the sustainability indicators perform?

The Sub-Fund has been managed in accordance with its sustainability indicators as defined below.

For the selection of sustainable investments, the portfolio manager took into account the ESG assessments of issuers, produced by Candriam's team of ESG analysts.

For companies, these assessments are based on the analysis of the company's interactions with its main stakeholders and on the analysis of its business activities and their impact, positive or negative, on the main challenges of sustainable development such as climate change and resource depletion. Additionally, Candriam's ESG analysis includes exclusion filters based on compliance with international standards and involvement in controversial activities.

Candriam's ESG research and analysis for sustainable investing also assesses investments for compliance with the 'do no harm' principle, a sustainable investment objective and good governance practices.

This integration of Candriam's ESG research methodology has enabled the Fund to achieve the minimum proportion of sustainable investments defined in the prospectus (minimum 85%). The proportion of sustainable investments in the Fund was therefore above this minimum threshold, as detailed in the section "What was the proportion of sustainability-related investments?"

### ...and compared to previous periods?

Not applicable as no data is available for previous periods.

### How did the sustainable investments not cause significant harm to any sustainable investment objective?

Candriam ensured that its sustainable investments did not cause significant harm to any environmental and/or social sustainable investment objective by means of its ESG research and analysis of corporate and sovereign issuers. Based on its proprietary ESG Ratings and Scorings, Candriam's ESG methodology set clear requirements and minimum thresholds to identify those issuers that qualify as 'sustainable investment' and, in particular, do not cause significant harm to any environmental and/or social sustainable investment objective.

The 'Do no significant harm' principle, in particular, was assessed for corporates through:

- the consideration of "principal adverse impacts"
- the alignment with the OECD Guidelines for Multinational Enterprises and the UN Global Compact to ensure minimum environmental & social safeguards.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

### \_ How were the indicators for adverse impacts on sustainability factors taken into account?

The consideration of adverse impacts is central to Candriam's sustainable investment approach. Principal adverse impacts were taken into account throughout the entire ESG research and analysis process and through a wide range of methods:

For the analysis of corporate issuers, these methods include:

- 1. ESG rating of corporates: the ESG research and screening methodology considers and assesses the principal adverse impact on sustainability from two distinct, but interlinked, angles:
- the company's issuers' business activities and how they impact, either positively or negatively, key sustainable challenges such as climate change and resource depletion;.
- company's interations with key stakeholders.
- 2. Negative screening of companies, which includes a norms-based exclusion and an exclusion of companies involved in controversial activities.
- 3. Engagement activities with companies , through dialogue and voting activities, which contribute to avoiding or reducing the extent of the adverse impacts. The ESG analysis framework and its results feed our engagement process, and vice versa.

For the analysis of sovereign issuers, these methods include:

- 1. Country ESG Scores: the ESG research and screening methodology considers and assesses key negative sustainability impacts around four sustainability dimensions: Natural capital, Human capital, Social capital, and Economic capital.
- 2. Negative Country Screening, which includes the following:
- Candriam's list of highly oppressive regimes -States with serious human rights violations;
- Freedom House's World Freedom Index states considered "not free".

The integration of the principal adverse impacts on sustainability factors has been based on the materiality or likely materiality of each indicator for each specific industry / sector/ to which the company belongs and for each country to ensure that a country's score adequately reflects the short, medium and long-term problems, challenges and/or opportunities that matter for that country's future development. This materiality depends on several elements, such as the type of information, quality and extent of data, applicability, relevance and geographical coverage.

## \_ Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-fund's investments were subject to a norms-based controversy analysis that considered the compliance with the international social, human, environmental and anti-corruption standards, as defined by the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises. The International Labour Organisation and International Bill of Human Rights are part of the many international references integrated into our norms-based analysis and ESG model.

This analysis aimed to exclude companies that have significantly and repeatedly breached any of these principles.

### How did this financial product consider principal adverse impacts on sustainability factors?

At Sub-Fund level, the main negative impacts (PAI) on sustainability factors have been taken into account by one or more means (https://www.candriam.com/fr-be/private/sfdr---belfius/ > SFDR declarations – Funds > Policy on the main negative impacts at product level):

- Engagement & Voting: in order to avoid and/or reduce the negative impact on the sustainable objectives, the Sub-Fund has also taken into account the negative impacts in its interactions with companies, through dialogue and voting. Candriam has prioritized its engagement and voting activities based on an assessment of the most material and relevant ESG challenges facing industries and issuers, considering both financial and societal impacts/ stakeholders. Therefore, the level of engagement with each company within a single product may vary and is subject to Candriam's prioritization methodology.

#### - Dialog:

The climate (PAI1 to PAI6) is obviously central in our exchanges with companies. Priorities for climate engagement on the business side are identified taking into account:

- issuers with a low transition profile (proprietary transition risk model), and/or still very carbon-intensive (Scope 1-2) or with significant Scope 3 emissions,
- issuers in the financial sectors still largely exposed to fossil fuels and playing a key role in financing the transition
- relative exposure of the managed portfolios to the above issuers.

Our objective is obviously to encourage companies to report publicly on their alignment on a 1.5° trajectory and to support such alignment. Beyond any Net Zero commitment and absolute disclosure of Scope1-2-3 emissions, we will therefore encourage them to provide information on how the short/medium term targets are aligned with the scientifically recognized 1.5° trajectory. In particular, we expect issuers to explain how their strategy and investment plan serve their decarbonization commitment. We generally combine individual dialogue and collaborative dialogue. As in the previous year, we continue to support and actively participate in several collaborative initiatives such as Climate Action 100+. These initiatives not only contribute to increasing the level of transparency on greenhouse gas emissions and the associated strategy, but also to obtain a fundamental leverage effect to support strategic changes. The results of these engagements are detailed in our annual Engagement and Voting Report, available on our public website (https://www.candriam.com/en/professional/insight-overview/publications/#sripublications).

Given the geopolitical context and the observed increase in inequalities, several commitments have also been carried out in terms of the protection of fundamental human rights at the level of the direct or indirect workforce (due diligence of the supply chain) (PAI10, PAI11). We also conducted a dedicated post-covid direct engagement campaign aimed at investigating the impact of stakeholder relations and the changes now embedded as the "new normal course" of business for Candriam beneficiary companies. In the same vein, human capital management is an aspect that we address in most of our discussions with companies. We continue to support Workforce Disclosure Initiative by advocating for better access to reliable, relevant and comparable data on the direct and indirect workforce of companies.

#### - Voting:

Candriam's approach to corporate governance is based on internationally recognized standards, in particular the principles laid down by the OECD and by the International Corporate Governance Network (ICGN).

In this regard, Candriam exercised its voting rights when they were available on the positions in the portfolio. Shareholder rights, shareholder equality, board accountability, transparency and integrity of financial statements are key pillars of our voting policy. Directors' compensation and election focus most of our votes against management. Indeed, we require companies to respect the principle of performance-based remuneration and will show our disagreement as soon as we deem the level of remuneration excessive or the conditions of allocation not transparent or demanding enough. Likewise, we expect companies to meet our minimum independence requirements: on boards that do not meet this requirement, we oppose the (re)election of any non-independent director, with the exception of the CEO. Diversity (PAI13) and the level of expertise of the Board are of course also taken into account in these votes.

In addition, Candriam always considers the relevance, consistency and feasibility of the measures sponsored by any ESG resolution before voting.

In the best interest of its clients, Candriam takes into account the internal ESG opinion on the companies held, but also any results of engagement with them, in its voting choices.

As part of Candriam's voting policy, specific guidelines are applied for a range of environmental (e.g. climate (PAI1 to PAI6), biodiversity (PAI7)), social (e.g. diversity, gender pay gap (PAI12), human rights (PAI10, PAI11)) and governance-related management and shareholder resolutions. Specifically, Candriam welcomes the introduction of management-sponsored "Say-on-Climate" resolutions. Candriam has built a detailed framework to apply to each Say-on-Climate resolution, which assesses the rigor and alignment of the company's transition strategy with a net zero emissions 2050 trajectory. As a result, most of they did not get our support during the period.

- Exclusion: Candriam's negative screening of companies or countries was aimed at avoiding investments in harmful activities or practices and may lead to exclusions linked to the negative impact of companies or issuers.
- Monitoring: calculation and evaluation of the main negative impact indicators, including reporting at Sub-Fund level. Some of these indicators may have explicit objectives and may be used to measure the achievement of the sub-fund's sustainable investment objective. See below the results of the indicators of this Sub-fund:

Indicators	Results		Coverage ratio	
	Covered Portfolio Involved	Portfolio Involved	Portfolio Covered	Eligible Portfolio Covered
PAI 1. Greenhouse Gas (GHG) emissions - scope 1 (tons)	5082.89990934 627			
PAI 1 scope 2	2449.12570339 875			
PAI 1 M1 - Carbon Emissions Total	7532.02561274 502			
PAI 2. Carbon footprint (tons per EURm)	33.2782959270 343			
PAI 3. GHG intensity of investee companies (average)	96.5561727702 29			
PAI 4. Exposure to companies active in the fossil fuel sector	2.67			
PAI 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0			
PAI 13. Board gender diversity (average)	35.36			
PAI 14. Exposure to controversial weapons (anti- personnel mines, cluster munitions, chemical weapons)	0			
PAI 15. GHG intensity	230.297506888 454			
PAI 16. Investee countries subject to social violations	0			

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/04/2022 - 31/03/2023

This graph represents 100.00% of the total investment.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What was the share of investments made in transitional and enabling activities?

The Sub-Fund is unable to publish a percentage of alignment with the Taxonomy, nor on transitional and enabling activities, because very few companies globally provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

### How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

Not applicable as no data for the previous period is available.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund held a 39.48% share in sustainable investments with an environmental objective not aligned with the EU taxonomy.

Indeed, to date, only two of the six objectives have entered into force in 2022 and very few companies at the global level provide the data necessary for a rigorous assessment of their alignment with the Taxonomy.

### What was the share of socially sustainable investments?

The Sub-Fund had a share of investments with a social objective of 54.85%

### What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The investments included in the "Non-sustainable" section are present in the Sub-Fund for 5.67% of the total net assets.

These investments include one or more of the following assets:

- Cash: Cash at sight, cash deposits, reverse repos necessary for the management of the Sub-Fund's liquidity following subscriptions/redemptions and/or resulting from the Sub-Fund's market exposure decision.
- Investments in issuers considered to be sustainable investments at the time of investment and which are no longer fully aligned with Candriam's sustainable investment criteria. These investments are intended to be sold.
- Non-single name derivatives used for efficient portfolio management purposes and/or for hedging purposes and/or temporarily following subscriptions/redemptions.

### What actions have been taken to attain the sustainable investment objective during the reference period?

The SICAV Belfius Sustainable has the sustainable investment objective of having a carbon footprint 25% lower than that of its benchmark index. The SICAV is made up of 3 sub-funds: Belfius Sustainable Low, Medium and High. It invests in underlying funds and direct lines. The underlyings have been selected in order to respect the sustainable investment objective of the portfolio as planned.

To materialize the consideration of this objective and of the issues related to climate change, the carbon footprint of the underlyings has been measured.

As of 03/31/2023, the carbon footprint of the Belfius Sustainable High portfolio is 33.28 tCO2-eq / million euros invested, compared to 74.75 tCO2-eq / million euros invested for the portfolio's benchmark index. Belfius Sustainable High's overall ESG score is 56.2 compared to 52.7 for the portfolio's benchmark index.

In order to respect its sustainable investment objective, the SICAV invests in a majority of underlying article 9 funds and has initiated / strengthened positions in issuers with a positive ESG profile, based on Candriam's independent assessment at during the reference period.

These titles are chosen meticulously and mainly distributed according to several themes, including (1) Climate change and resource depletion, (2) Demographic evolution and consumption, (3) Digitalization and innovation, (4) Health care and (5) Real estate and infrastructure.

The thematic of climate change and resource depletion includes positions in the following names due to their focus on the energy transition to a low carbon environment: Iberdrola and Schneider Electric.

Schneider Electric's activity is strongly oriented towards the challenges of energy transition and Iberdrola is one of the most advanced community service players on the green energy production front.

In the real estate and infrastructure thematic basket, we hold positions in Kone Oyj, Otis Worldwide Corp and Equinix Inc. Equinix is the global leader in digital infrastructure and has an enduring goal to be the first datacenter to use only renewable energies. They are now at 92% of their goal.

The SICAV also sold securities whose issuers no longer met the required conditions, including Atlas Copco in April 2022 and Vinci in October 2022.

In March 2022, the ESG team issued an ESG alert on Atlas Copco due to its exposure to the Russian nuclear weapons program. Candriam's ESG team takes a zero-tolerance stance on weapons and related services, including dual-use components for military purposes in Russia. This company represented significantly high risks that we did not consider acceptable for our ESG/Article 9 funds.

In October 2022, we sold Vinci SA, whose ESG score slipped below the acceptable limit for the SICAV. Our analysts revealed a changing score from positive to negative for their stakeholder management. The title was thus transferred.

### How did this financial product perform compared to the reference sustainable benchmark?

No specific index is designated as a sustainable benchmark to meet sustainable investing objectives.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

# **Belfius Article 9 Multi- Assets Strategies**

**Transparency code** 

### Statement of Engagement

Sustainable & Responsible Investment is an essential part of the strategic positioning and behaviour of the Management Company, Belfius Investment Partners and the Investment Manager, Candriam. Belfius Investment Partners (Belfius IP) and Candriam have been involved in SRI since 2019 and 1996, respectively, and both welcome the European SRI Transparency Code.

This is the fourth transparency code for this strategy. This is part of Belfius Investment Partners and Candriam's third and thirteenth statement of commitment, respectively, and covers the period 2022-2023. Our full response to the European SRI Transparency Code can be accessed below and is available in the annual report of the retail funds and on our website.

The responses to the European SRI Transparency Codes are available on our respective corporate websites:

#### **Belfius Investment Partners**

https://www.belfiusip.be/fr/esg/index.aspx

#### Candriam:

SFDR Belfius | Candriam

#### **Compliance with the Transparency Code**

Belfius Investment Partners¹ and Candriam are committed to transparency, and we believe that we are as transparent as possible given the regulatory and competitive environments that exist in the countries in which we operate. Belfius Investment Partners and Candriam meet the full recommendations of the European SRI Transparency Code.

December 2022

December 2022 - 2 -

## 2. General information about the fund management company

### 2.1. Name of the fund management company that manages the applicant fund(s)

### The Management Company of the fund is:

Belfius Investment Partners Place Rogier, 11 1210 Bruxelles

Belfius IP is the Asset Management competence center for Belfius Group.

### The Investment Management Company that manages the applicant fund is the following:

Candriam Serenity Bloc B L-8009 SRASSEN

Please consult our website for further information: www.candriam.com. This code applies to strategies classified as Article 9 <u>according to the "Sustainable Finance Disclosure Regulation" (SFDR)</u> and managed by Candriam.

Any question regarding sustainable and responsible investment (SRI) at Candriam can be e-mailed to the following address: <a href="maileotropy: investor.support@candriam.com">investor.support@candriam.com</a>.

### 2.2. What are the company's track record and principles when it comes to integrating SRI into its processes?

#### **Management Company - Belfius Investment Partners**

Sustainable investment is an investment strategy and practice that incorporates Environmental, Social Sustainable investment is an investment strategy and practice that incorporates Environmental, Social and Governance (ESG) factors in investment decisions and active ownership.

The awareness and demand of a constantly growing number of investors for long-term sustainable investing is a trend that is driving the investment process for all asset classes towards longer term investments and is there to stay. It allows to align their investment objectives with their fiduciary duties towards society as a whole.

Belfius IP has adopted an investment process in which fundamental analysis is combined with environmental, social responsibility and governance factors that are gradually further integrated.

The integration of ESG factors is not yet applied to the whole range of investment products developed by Belfius IP. The focus is currently set on sustainable investment products.

The signature on 28th February 2019 of the UN Principles for Responsible Investment (UN PRI) is one of the first commitments taken by Belfius IP towards this progressive introduction of a specific and gradual attention to ESG in the development of (sustainable) investment solutions.

#### SFDR Belfius | Candriam

#### **Investment Management Company – Candriam**

Sustainability is rooted in Candriam's operating model and forms a key part of our corporate culture. Our sustainable development strategy leads us to incorporate the overall trends that will shape the world of tomorrow when defining our strategic operational choices. This strategy aims to establish and

December 2022 - 5 -

maintain a balance between, on the one hand, responsible behaviour towards all stakeholders and, on the other, (a) the synergies between our SRI and traditional investment activities, and (b) the determination to run the company in consideration of the Environment and of Society.

Candriam has been managing Sustainable Investments since 1996. As a responsible asset manager for over two decades, we are committed to the continuous development of our long-standing and holistic Environmental, Social, and Governance analysis approaches, and to the on-going expansion of our ESG integration process towards our large range of investment products.

As a sustainable asset manager, Candriam recognizes the importance of taking into account sustainability risks and opportunities in the portfolios it manages and to duly consider sustainability impacts.

### Milestones in Candriam's Environmental, Social, and Governance Investing:

- **1996 -- First Sustainable Equity Fund.** In 1996, Candriam's predecessor company, Cordius Asset Management, offered investors our first Sustainable Equity Fund.
- **2003 -- Structured Proxy Voting System Established.** Candriam was a pioneer among Belgian investment managers in exercising the voting rights of its clients to improve investment returns. In 2003 we began a systematic and structured proxy voting effort.
- **2005 -- Proprietary Environmental, Social, and Governance research.** In 2005, Candriam launched its in-house ESG analysis. Our ESG approach is based on a sophisticated set of ESG factors and performance indicators in six stakeholder domains, which is Investors, Employees, Environment, Suppliers, Customers, and Society, and are the core of Candriam's approach to Sustainable and Responsible investing.
- **2005 -- Engagement Embedded in the Research Process.** Our Engagement activities began at the outset of our in-house ESG research in 2005. Engagement arose from our dialogues with companies to obtain additional information. Our direct engagement with companies has grown organically over the years; for Candriam, Dialogue is synonymous with ESG Research.
- **2006** Founding Signatory of the UN Principles for Responsible Investing. Candriam was present at the birth of the PRI. Candriam has been participating in industry working groups and sustainable investing organisations since 2003.
- **2008 Emerging Markets ESG Investing.** We believe that analysing ESG issues in Emerging Markets requires a different approach to accommodate the lower levels of information and transparency, as well as lower levels of issuer and investor experience with ESG factors.
- **2009 ESG country framework established.** Our analysis of sovereign and related issuers, based on the four pillars of Human Capital, Natural Capital, Social Capital, and Economic Capital.

December 2022 - 6 -

- **2010 ESG Indexed Funds** In 2010, following the controversial armaments exclusions firm-wide, Candriam decided to apply its SRI screening to its indexed fund range
- **2016 --- Engagement: from Initiation to Influence.** In 2016, we significantly increased our commitment by dedicating a group of our experienced Sustainable Investing professionals to full-time coordination of our decade-long efforts. Currently, we are putting our Engagement efforts behind three 'Conviction Topics': Corruption, Energy Transition, and Well-Being at Work.
- **2017 --- Responsible Investing in Emerging Market Debt and High Yield Debt.** In 2017, our expansion of our ESG included SRI Bond Emerging Markets, and SRI Bond Global High Yield. Five Candriam SRI funds were awarded AFNOR Certifications by the French-government-backed organization, making our High Yield fund the first to receive an SRI label.
- **2017 Helping to Train the Next Generation of Responsible Investors** In October 2017, Candriam launched the Academy for Sustainable and Responsible Investing. The Candriam Academy aims to raise awareness, promote education, and improve knowledge of sustainable investing via an innovative and accredited online educational platform.
- **2018 --- Launch of Fossil Free funds.** Launch in September 2018 of two Candriam Fossil Free funds to support investors moving towards carbon neutrality.
- **2018 --- Exclusion of Thermal Coal and Tobacco from all investments.** In 2018, all Candriam strategies divested from companies with more than 10% of their activities in thermal coal, and from any companies which initiate new thermal coal projects, based both on stranded asset and sustainability considerations. Candriam also divested from any companies with more than 5% of their activities stemming from tobacco. These exclusions demonstrate our commitment to both investment performance and responsibility.
- **2019 --- Launch of Climate Action strategy.** Launched in May 2019, the fund invests in companies providing tangible solutions in terms of mitigation and adaptation to Climate Change.
- **2020 --- Launch of Circular Economy strategy.** Launched in April 2020, the strategy invests in companies providing solutions/services in the advancement of a more sustainable economic model.
- **2020** and beyond Holistic Integration of Sustainability in Finance. In 2020 and beyond, we plan to continue to innovate and develop new sustainable investment solutions, as well as to increasingly integrate ESG risks and opportunities in all our investments, drawing on our more than two decades of experience in sustainable investing.
- **2021 Joining the Net Zero Asset Manager Initiative.** Candriam Announced on the 1<sup>st</sup> November 2021 advanced decarbonisation ambition and joins the Net Zero Asset Managers Initiative with the aim to secure a 50% reduction in greenhouse gas emissions across a significant share of its investment portfolio by 2030 and will pursue net zero emissions of its investment portfolio by 2050 or sooner.

### 2.3. How does the company formalise its sustainable investment process?

#### Management Company - Belfius IP

We formalise our sustainable investment process by the formal publication of our Sustainable Policy on our website:

https://www.belfiusip.be/fr/esg/index.aspx

In addition, Belfius IP is also an active member of the "Steering Committee ESG", an internal committee which intends to expand and streamline best ESG practices within the Belfius Group.

For Belfius IP due to its current specificities, namely being a fund of funds manager, this is essentially translated in the specific attention granted to ESG criteria in the selection of the underlying instruments (funds, trackers) in which the portfolio managers or investment managers may invest.

Belfius IP continuously improves its policies and ESG criteria in its fund selection process or daily monitoring in line with the PRI requirements and future reporting's, as well as with the continuously evolving standards applicable to the sustainable product range.

**Investment Management Company - Candriam** 

December 2022 - 7 -

**Responsible Investment Policy** – We have actively incorporated ESG analysis in our investing since 1996.

At Candriam, we believe that a company's long-term value is not purely measurable by purely financial metrics. By evaluating ESG criteria, investors can identify additional factors which affect a company's long-term value.

ESG considerations are central to Candriam's investment philosophy. To this end, Candriam's company-wide controversial activities policy integrates ESG factors including exclusions on controversial weapons, thermal coal and tobacco.

The policy is applicable to all funds for which Candriam has the full discretion as management company and investment manager. Except if otherwise agreed between the relevant parties, the following portfolios are therefore excluded from the scope of this policy:

- Funds for which Candriam is the Management Company but has delegated the investment management activity to another entity
- Funds for which Candriam is not the Management Company but has received the investment management activity through a delegation by another entity
- Fund of Funds managed by Candriam where the underlying funds are not managed by Candriam

For third-party discretionary portfolio mandates, company-wide exclusions are applied if parties so agree.

For additional information, please find Company-Wide Exclusion Policy published on our website:

https://www.candriam.com/fr-be/private/SysSiteAssets/medias/insights/sfdr-publications/exclusion-policy-long-version\_en.pdf

In addition to publishing our Transparency Codes, Candriam formalises its responsible investment process through publishing its Sustainability Risk Policy, followed by its Engagement and Proxy Voting Policies:

Sustainability Risk Management Policy (candriam.com)

Stewardship @ Candriam: Engagement policy

proxy\_voting\_policy\_2023.pdf (candriam.com)

**Responsible Practices at Candriam -** Sustainability is embedded in Candriam's business model and forms an essential part of our culture. We are committed to incorporating the global trends that will shape tomorrow's world in our strategic business choices and our daily life. We balance responsible behaviour towards our stakeholders with the synergies between our ESG and traditional financial investment activities, as well as with our role in environmental and societal stewardship.

We offer transparency through our annual review of our own internal Environmental, Social, and Governance practices, and the results are published in our annual Corporate Sustainability Report (CSR). Candriam's CSR lists our concrete achievements and our 'deliverables' in our commitment to develop our own company responsibly. The latest version is available on our corporate website at https://www.candriam.com.

Commitment at all levels is essential. Our Group Strategic Committee regularly assesses our relevant sustainability challenges to determine how Candriam should manage our stakeholder relations and how we should attune our business model and practices to all these long-term challenges.

In 2020, we further clarified the firm's sustainability governance:

- A Strategic Sustainability Committee meet regularly: the GSC, supported by Candriam's ESG and CSR experts, sets out the strategic orientations for both ESG investing (both product and commercial wise) and CSR.
  - A company-wide Sustainability Risk Committee, reporting into GSC, assesses corporate reputational & financial risks regarding sustainability including climate risks and defines a controversial Company and Country Watch list for all Candriam's activities
  - The Proxy Voting Committee furnishes strategic guidance on Proxy Voting best practices and monitor Candriam's voting policy

December 2022 - 8 -

- The Candriam Institute for Sustainable Development oversees Candriam's Philanthropy and community-impact program, through the support of initiatives in ESG Research & Education and in the Social Impact domain.
- **The ESG Steering** coordinates the implementation of the strategic ESG Roadmap, relying on several agile investments, operational and IT workstreams.
- The CSR Steering oversees and coordinates the implementation of the CSR Roadmap across the axes of Staff, Clients, Operational Value Chain, Governance and Community.

As an investment manager, we strive to integrate ESG across all processes, offering the best services and products in ESG Investing. As a company, we commit to upholding the highest sustainability standards in every dimension of our business and we believe that our new ESG Governance Framework will allow us to do so in a more efficient manner.

### 2.4. How are ESG risks and opportunities – including those linked to climate change – understood/taken into account by company?

### Management Company - Belfius IP

The materiality of environmental, social and governance (ESG) issues differs substantially between industries. In each factor, some material issues should be assessed<sup>2</sup>.

Environment	Social	Governance
<ul> <li>Climate Change &amp; Carbon Risk</li> <li>Use of Raw Materials, Water &amp; Energy</li> <li>Biodiversity &amp; Land-use</li> <li>Generation of Wastes &amp; Noise</li> <li>Supply chain management</li> </ul>	<ul> <li>Human Rights</li> <li>Labour Rights, Equal Opportunities</li> <li>Occupational Health &amp; Safety</li> <li>Government and Community Relations</li> <li>Consumer Protection, Product Safety</li> <li>Personal Data Safety &amp; Privacy</li> </ul>	<ul> <li>Transparency, Reporting on Material Issues &amp; Audited Reports</li> <li>Board Composition and Independence</li> <li>Accounting risk, &amp; Audit Committee Structure</li> <li>Bribery and Corruption</li> <li>Aggressive Tax Planning</li> </ul>

This approach applies to investments in all asset classes, within practical limitations and in accordance with the fiduciary responsibility of Belfius IP towards its clients.

On top of this ESG analysis to be done in each security in which the sustainable funds will invest and in order to implement the investment strategy, the fund managers may reduce the investment universe by applying some of the following methodologies:

- Exclusion of companies (negative screening)
- Selection of best-in-class companies within the respective sectors (positive screening)
- Selection of companies based on sustainable investment themes
- Dialogue with companies (engagement)
- Exercising voting rights (voting on shareholder meetings)

The most important objectives for the integration of ESG criteria and processes are:

- The strategic and tactical asset allocation has to be in line with the clients' investment objectives
- The investments are broadly allocated within and across various asset classes, various instruments (equities, fixed income instruments, funds or trackers) and investment styles in order to maintain a sufficient diversification within the portfolios
- The sustainable investment policy will be executed by Belfius IP directly (though its own portfolio managers) or indirectly (though the selection of sub investment managers to which the daily management of the funds is delegated) through the selection of various, externally managed, investment funds or trackers

December 2022 - 9 -

<sup>&</sup>lt;sup>2</sup> The list of factors is not exhaustive & may evolve over time.

In addition to address climate change, we have also included limits and exclusions on high CO2 emitting activities such as coal, conventional and non-conventional oil & gas as well as electricity generation. Special attention is also placed on nuclear power.

#### Coal activities

Coal poses unacceptable environmental, climate and societal risks. Investments in these industries could retard investments in transitional and renewable energy sources and thus should not be part of a socially responsible financial product.

A socially responsible investment product shall not finance companies that derive 5% or more of their revenues from thermal coal activities if no credible alignment with the Paris Agreement has been demonstrated, specifically through a robust SBTi target or the allocation of a sufficient portion of capital expenditure to activities contributing positively.

#### Conventional & Unconventional Oil & Gas activities

A socially responsible product shall not finance oil & gas companies deriving more than 5% of their revenues from all involvement in conventional or direct involvement in unconventional oil & gas and companies developing new unconventional projects. Companies having demonstrated a credible energy transition strategy that has been validated by the SBTi or that are allocating over 15% of their capital expenditures to activities that contribute positively to climate action can remain eligible.

The companies should have policies in place or have clear public statements confirming the aim of accelerating the transition to a low carbon business model and of supporting their R&D in sustainable energy technologies. Belfius IP & the asset managers will support companies accelerating the transition to a low carbon business model and will support their R&D in sustainable energy technologies.

#### **Electricity generation**

A socially responsible product shall not finance electricity utilities with a carbon intensity that is not aligned with a below 2 degrees scenario<sup>3</sup>.

#### This can be translated in the following max thresholds:

	2019	2020	2021	2022	2023	2024	2025
Max.gCO2/kWh	429	408	393	374	354	335	315

In case no data on electricity power producers' carbon intensity is available, we will seek alternative sources of information and demonstration of good practice as follows:

The energy mix is a meaningful but not sufficient indicator. It is necessary that the use of thermal coal and nuclear power in electricity production does not increase, unlike the use of renewable energies, both in production and capacity.

In addition, the alignment with the Paris Agreement has to be demonstrated, and in particular through a robust SBTi target, a sufficient use of its capital expenditure for this purpose or deriving the main part of revenues from the use of renewable energies in electricity production.

Belfius IP & the asset managers will support companies accelerating the transition

#### **Nuclear Energy**

The electricity generation & heat sector is the largest source of human-made CO2 emissions. It is also the sector that can most readily be decarbonized.

The scale of the challenge requires growth of all available clean energy technologies.

As such, the production of energy through nuclear reactors can be seen as part of the solution, but raises many questions linked to for instance:

The risks associated with the operation of nuclear power plants (Tchernobyl or Fukushima are recent examples), or

December 2022 - 10 -

<sup>&</sup>lt;sup>3</sup> Scenario provided by the International Energy Agency (2017)

- The storage often very long term of the radioactive waste that is generated and for which there is for the time being no real clean solution
- The dismantling of nuclear power stations and the proliferation of nuclear fuels

Belfius IP understands the exit process of this industry may be long. Belfius IP will assess and monitor closely the commitment and the transition progress of companies using the nuclear energy. Additionally, other material indicators like the average age of the nuclear fleet will be closely monitored in order to sufficiently mitigate additional risks and hence steer investment decisions.

### For further information, please refer to our Sustainable Policy on our website:

https://www.belfiusip.be/fr/esg/index.aspx

### **Investment Management Company - Candriam**

Candriam considers that a company's long-term value is not solely influenced by financial criteria such as income or growth in the operating margin. By incorporating environmental, social and governance (ESG) criteria, we identify other factors liable to influence a company's value and competitiveness over the medium and long term. Within the analysis of Environmental factors, we consider a company's exposure and strategy in terms of Climate Change.

The inclusion of ESG factors rounds out the assessment of risks incurred by issuers. These risks can be broken down into four categories:

- **Operational risk:** risk of losses stemming from a failure or inadequacy in an institution's procedures, staff, internal systems or due to external events.
- Reputational risk: risk of loss in enterprise value stemming from the materialization of a risk, affecting the perception of the company held by its clients, shareholders, counterparties, regulators or investors.
- Strategic risk: risk of losses stemming from an actual or potential risk, affecting capital and profit, and resulting from changes in business model or adverse commercial decisions, a lack of responsiveness to a market development, or the inappropriate implementation of decisions.
- **Financial risk:** risks arising from banking and financial activities, predominantly including foreign exchange, interest rate and liquidity risks.

More specifically, climate change is a source of financial and reputational risk for investors. There are two types of climate risks: physical risks and risks associated with a transition to a low-carbon economy.

#### **Physical risks**

Physical risks cover immediate material and financial aspects, as well as operational aspects (e.g. production halts, water scarcity) and reputational aspects (e.g. conflicts with local populations, major migratory flows).

#### **Transition risks**

Searching for solutions to climate change issues can generate risks and opportunities for some sectors/companies. These risks cover:

- Changes in prices of energy resources and energy efficiency, with the added drawback of leaving companies with stranded assets:
  - Reduction of renewable energy costs, and increase in supply of renewable energies, have driven down demand for the highest-polluting energies (with coal in the lead)
  - Reserves of the highest-polluting energies may end up never being used, forcing the owners to write them off
- Changes in anti-pollution tax systems and more restrictive carbon markets, driving up prices of CO2 per metric ton
- Financing risk for companies active in high-polluting sectors or involved with obsolete energy activities:

December 2022 - 11 -

• This risk has arisen due to the growing preference of clients and other stakeholders for energy transition financing and associated risks

#### Type of risks

# limate Risk

Risks	Operational	Reputational	Strategic	Financial
Physical risks	$\checkmark$	✓		
Transition risks - asset value			✓	
Transition risks - legal and market constraints	<b>√</b>		<b>√</b>	<b>√</b>
Transition risks - financing/funding		✓		<b>√</b>

Candriam decided to exclude companies on a firm-wide level displaying more than 10% in thermal coal activities and those launching new projects in order to take into account potential stranded assets linked to climate change.

At Candriam, the inclusion of ESG criteria is the first step in the responsible investment process. The integration of ESG factors within investment processes ensures that short-, medium- and long-term ESG and financial risks and opportunities are taken into account and thus adds value to investment decisions.

Furthermore, as described previosuly, Candriam has implemented a firm-wide ESG governance structure to ensure proper oversight and information flow of ESG issues. Climate Risks are analysed by the Sustainability Risk Committee which assesses corporate reputational & financial risks. This committee reports directly into Candriam's Group Strategic Committee.

### 2.5. Which Teams are involved in the company's sustainable investment activity?

#### Management Company - Belfius IP

In order to follow ESG topics within the management company, Belfius IP is organized around a dedicated transversal ESG workgroup, gathering different competencies in the different teams (Fund Selection, Portfolio Management, Risk, Compliance, IT, ...). The tasks of this active workgroup are diversified but focus on a long-term goal, being the progressive implementation of ESG within the processes & management or monitoring of portfolios.

#### **Investment Management Company - Candriam**

Candriam launched its first SRI fund in 1996. For more than 25 years now, the company has developed expertise in ESG analysis thanks to its **dedicated ESG Team**. The team comprises analysts who specialise in specific sectors, sovereign analysis and active engagement activities. The team has developed its own ESG analysis methodology applied to governments, corporations and supranational agencies/organisations.

For the majority of our SRI strategies (i.e. strategies based on our proprietary industry-specific ESG materiality framework), the ESG analysts provide recommendations on issuers that determine the eligibility and, as a consequence, the ESG investment universe for the portfolio manager teams. The **portfolio managers** then apply their respective investment processes and select issuers from this ESG universe. For specific thematic strategies, the eligibility of issuers is determined in conjunction with the investment teams during dedicated committees.

Furthermore, in order to enhance synergies between the ESG Team and portfolio management teams, one or more portfolio managers/analysts on each portfolio management team are designed as "ESG Ambassadors." The ESG analysts regularly take part in Portfolio Management Committees and on an ad hoc, monthly or quarterly basis the ESG ambassadors and ESG Team discuss ongoing projects and exchange ideas on ESG themes.

### 2.6. How many employees are directly involved in the company's sustainable investment activity?

#### Management Company - Belfius IP

The ESG workgroup focusing on ESG topics is made of 5 employees.

### **Investment Management Company - Candriam**

Across our front office teams, there are approximately 60 employees that are major stakeholders and directly involved in the company's sustainable investment activity.

For more than 25 years now, the company has developed expertise in ESG analysis thanks to its dedicated ESG Team. The team comprises analysts who specialise in specific sectors, sovereign analysis and active engagement activities. The team has developed its own ESG analysis methodology applied to governments, corporations and supranational agencies/organisations.

For the majority of our SRI strategies (i.e. strategies based on our proprietary industry-specific ESG materiality framework), the ESG analysts provide recommendations on issuers that determine the eligibility and, as a consequence, the ESG investment universe for the portfolio manager teams. The portfolio managers then apply their respective investment processes and select issuers from this ESG universe. For specific thematic strategies, the eligibility of issuers is determined in conjunction with the investment teams during dedicated committees.

Furthermore, an ESG Masterclass is organized on a regular basis to provide an extensive understanding of ESG related topics while educating our Portfolio Managers & Analysts to meet their sustainable investment objectives. This unique opportunity has been designed to provide not only training related to sustainability issues, but also information on new ESG developments and sector analysis developed by our dedicated ESG team.

December 2022 - 13 -

### 2.7. Is the company involved in any RI initiatives?

### **Management Company - Belfius IP**

# 2.8. What is the total number of SRI assets under the company's management?

#### Management Company - Belfius IP

As of end of December 2021, the firm's SRI assets under management, based on article 8 and 9 funds, totaled €17.43 billion.

#### **Investment Management Company - Candriam**

Our assets under management dedicated to ESG-related products have reached €105 billion as of December 2021.

# 2.9. What is the percentage of total SRI assets under the company's management?

#### Management Company - Belfius IP

As of end of December 2021, the firm's SRI assets, based on article 8 and 9 funds, represented 77.81%.

#### **Investment Management Company - Candriam**

Our assets under management dedicated to ESG-related products represent 67% of our total AUM, as of December 2021.

December 2022 - 21 -

#### 2.10. Which are the SRI funds publicly managed by the company?

#### Management Company - Belfius IP

In accordance with legal requirements, please refer to our website to access information regarding our SRI fund range. The information can be found in https://www.belfiusip.be/fr/fonds-investissements/index.aspx.

As of end of December 2022, the Belfius IP SRI funds. i.e., Article 9 funds, are the following ones:

Belfius Sustainable High Belfius Sustainable Low Belfius Sustainable Medium

# 3. General information about the SRI fund(s) that comes under the scope of the Code

## 3.1. What is (are) the fund(s) aiming to achieve by integrating ESG factors?

Belfius Investment Partners has entrusted Candriam with the management of an asset allocation mandate. The mandate invests in corporate and sovereign issuers, across developed and emerging markets, as well as in large and small & mid-cap companies

Candriam considers that a company's long-term value is not solely influenced by financial criteria such as income or growth in the operating margin. By incorporating environmental, social and governance (ESG) criteria, we identify other factors liable to influence a company's value and competitiveness over the medium and long term, which are not always immediately obvious in traditional financial analyses.

**ESG integration** is imperative as some of the sustainability challenges we face could test the resilience of financial and economic systems, whilst offering opportunities to foster innovation through our investments. This goes beyond environment and includes the social and governance dimension of corporate behaviour. Fully integrating ESG reflects our conviction that specific environmental, social and governance issues are being and/or will be priced in by financial markets participants through policy and/or societal change.

In this regard, financial metrics and accounting statements published by company are inherently backward looking and tell only part of the story. ESG analysis adds essential layers of information that capture the "intangible" aspects of a business not fully captured by traditional financial analysis. A growing share of companies' value is comprised of intangible risks and opportunities like brand, reputation, human capital and innovation. Sustainability affects those aspects directly and, as a consequence, makes it a relevant consideration within every investment strategy.

# 3.2. What internal or external resources are used for ESG evaluation of the issuers who makes up the investment universe of the fund(s)?

The ESG Investments & Research Team has developed its own ESG methodology applied to governments, corporations and supranational agencies/organisations. The portfolio managers then apply their respective investment processes and integrate ESG information in order to better assess the risks and opportunities that stem from the business activities and operations of companies. The ESG Analysts use internal and external research to feed their models.

The Team strives to source information from diverse sources as we consider information from different providers to be complementary. This is as a result of providers' varying coverage, methodologies, as

December 2022 - 22 -

well as culture which may ultimately lead to discrepancies in views and final ratings. These different assessments enable our ESG analysts to have a more holistic view of a company.

Please find below an overview of the external ESG data providers used by the Team:

Furthermore, we also source information from academic experts, sector federations, the media, and NGOs. Examples of NGOs used in analysis include:

- **Freedom House:** measure of freedom and democracy, understood via electoral process, political pluralism, functioning government, rule of law etc. (https://freedomhouse.org/)
- **Fraser Institute:** measure of human freedom, understood as the absence of coercive constraint (https://www.fraserinstitute.org/)
- Transparency International (CPI): measure of public sector corruption. (https://www.transparency.org/)
- Environmental Performance Index (EPI): ranks countries which are best addressing the environmental challenges that every nation faces
- Paris Equity Check: asses how fair are countries' climate pledges under the Paris agreement
- Ease of Doing Business Index: ranks countries on their ease of doing business

Lastly, our ESG analysts obtain information from various International Organizations, which are either an integral part of the ESG Sovereign framework or serve as additional information in analysis. Examples of International organizations include: World Bank, IMF, World Health Organization, UN Programme for the Environment, International Labour Organisation, United Nations Development Programme, United Nations Organisation Food and Agriculture Organisation.

#### 3.3. What ESG criteria are taken into account by the fund(s)?

We believe that all companies we invest in must display strong ESG practices. We exclude all companies that do not respect our company-wide exclusion policy and companies that have breached the principles of the United Nations Global Compact. This exclusion filter is coupled with an ESG assessment of companies by their ability to create value by integrating sustainability into their business activities and the interest of stakeholders within their operating and financial managerial processes.

Then, all portfolio managers monitor and take into account the sustainability information that they receive from the ESG team and **integrate them into their investment processes and decisions** in order to better assess the risks and opportunities for each issuer. This ESG integration approach will impact the fundamental and/or credit analysis of issuers, valuation and/or ultimately impact the final portfolio construction. For further information, please refer to question 4.1

#### Corporates **Controversial Activities Business Activities** Stakeholder **Analysis Analysis Norms-Based Analysis** Exclusion of socially and/or Climate Change Investors environmentally controversial Resources Depletion Environment activities Digitalisation **Employees** Health & Wellness Customers Monitoring of controversies related to Global Compact Principles Demographic Evolution Society **Human Rights** Suppliers Labour Rights Environment Corruption December 2022 - 25 -

For sovereign issuers, portfolio managers monitor and take into account the overall sustainability score of a country. The latter recognize how countries perform best across our four categories of sustainable development criteria: Natural, Human, Social and Economic Capital. These four capital domains incorporate a wide range of material ESG factors which the ESG team evaluate using our internally-defined Key Performance Indicators. This generates a dynamic capital-based analytical tree, which covers the sustainable development challenges and opportunities faced by each nation, a valuable source of information for portfolio managers.

Countries

# 4 Forms of Country Capital Human Capital Natural Capital Capital Capital Capital Capital

In addition, any country classified as Not Free by Freedom House is taking into account. Doing so, we aspire to set minimum standards of democracy, as well as avoiding countries that are involved in financing terrorism and money laundering.

For information regarding specific KPI's applicable to the funds, please refer to the table available under the respective link under Section 1 - Fund Covered by the Code.

# 3.4. What principles and criteria linked to climate change are scrutinized in the Fund(s)?

#### Corporate Issuers

Candriam believes investment opportunities and risks cannot be fully evaluated using traditional financial metrics alone. We believe that taking into account ESG criteria is a source of long term value and risk mitigation that cannot be fully captured by traditional financial analysis. To this end, our ESG framework assesses the risks and opportunities to create value through integrating Business Activities and Stakeholder management sustainability factors within their operating and financial managerial processes.

The **Business Activities Analysis** evaluates the company's exposure (services/products, production areas, market segments, etc.) to the major sustainable development challenges. These challenges are long-term trends liable to considerably influence the economic environment in which companies operate and to determine the future challenges in the market as well as the long-term growth opportunities. Candriam has identified five major challenges including **Climate Change**.

The **Stakeholder Analysis** evaluates a company's ability to incorporate stakeholder interests in its long-term strategy, insofar as they are a source of risks and opportunities for the company. These six categories of stakeholders include Investors, Employees, Customers, Suppliers, Society, and the **Environment.** 

To this end, we assess climate change risk and opportunities in both of our Business Activities and Stakeholder. In this top-down approach, we assess a company's **business model** exposure to **climate change** through the Business Activities analysis. Conversely, in the Stakeholder Analysis approach, we assess the way an organization **operates to its natural surroundings** to conduct its activities.

December 2022 - 26 -

Please find below further information on the **Climate Change** and **Environment** assessments in the **Business Activities Analysis** and **Stakeholder Analysis** respectively:

#### **Business Activities: Climate Change Challenge**

Climate change is considered to be a major and substantial challenge in sustainable development. Accordingly, it is assessed in all sector models and is a major source of risk (thus attributed a lower score) for high-impact sectors such as energy, transport and materials. In the course of this assessment, the impact of various activities is estimated and factors in greenhouse gas emissions from the source to final consumption (i.e. Scopes 1, 2 and 3). Based on this estimate, the impacts for each activity are ranked, as described opposite, on a scale from 0 to 100. The measurement of the impact itself is based on the company's exposure, according to revenue earned by the activity, except for the energy and utilities sectors, where it is based on fossil fuel reserves and installed capacity, respectively.

#### 100 Hydro Solar, windmills Nuclear, energy efficiency. vegetarian restaurants Phramacy, Industrial gas Media Electronic products Paint, Express glues, transport. cruises dairy products Aluminium. steel, PVC coal, brown coal/lignite 0

#### Stakeholder Analysis: Management of Environmental Relations

Exposure to environmental management risks and opportunities is especially significant for high-impact sectors such as energy, materials, utilities, automotive and real estate. In the course of analysing environmental management, other issues such as air pollution are also covered, including: energy use, biodiversity, soil use, waste and recycling, water consumption and the environmental impact of products.

#### Examples in the Energy sector:

- Strategies implemented
  - Environmental impact of new projects before launch;
  - Projects in renewable energy, energy efficiency;
  - Variable pay granted to executive managers based on environmental performances;
  - Technologies and measures used to prevent leaks in oil pipelines (fibre optic cables to detect leaks, pressure monitoring)
- Performances
  - Energy mix and CO2 emissions;
  - Oil leakage rate < sector average;
  - Gas flaring rate < sector average;</li>
  - High % of OHSAS 14001-certified sites

Furthermore, we apply a norms-based and controversial activities filter to exclude companies which may represent high risk due to violation of international laws and non-sustainable activities. In the norms-based analysis, we determine whether companies respect the principles of the UN Global Compact, including the respect of Environmental norms.

Lastly, we believe that investing in companies significantly exposed to conventional and unconventional oil and gas activities is not compatible with the efforts towards an energy transition and represent financial risk in terms of stranded assets. To this end, we apply exclusion thresholds based on issuer revenues for these activities.

December 2022 - 27 -

#### • Sovereign Issuers

Environmental considerations, including climate change, are naturally embedded in the framework through the Natural Capital.

Our framework puts climate change and environmental preservation at the forefront, as Natural Capital is not freely interchangeable with the human, social and economic capitals. Our Natual Capital pillar assesses how a country is conserving and sustainably employing its natural resources, managing its interaction with global environmental issues and challenges such as Climate change, its consumption of fossil fuels, its biodiversity stewardship and its handling of waste materials.

# 3.5. What is the ESG analysis and evaluation methodology of the fund manager/fund management company (how is the investment universe built, what rating scale is used etc.)?

Candriam's company-wide controversial activities policy integrates ESG factors including exclusions on controversial weapons, thermal coal, tobacco and for normative reasons.

We incorporate the results of the ESG Business Activities and Stakeholder analysis in the financial fundamental analysis.

The ESG Analysis is based on the following pillars:

- Controversial activity exclusions
- Norms Based Analysis
- Business Activities Analysis
- Stakeholders Analysis
- ESG score

#### Controversial activity exclusions

	Exclusion thresholds / criteria <sup>1</sup>				
	Controversial activity exclusions:				
Controversial Armaments	<ul> <li>Any involvement in: Anti-personnel landmines; Cluster bombs; Depleted uranium; Chemical weapons; Biological weapons</li> <li>Any involvement in nuclear weapons and white phosphorus</li> </ul>				
Thermal Coal	<ul><li>5% revenue threshold</li><li>Companies developing new projects</li></ul>				
Tobacco	<ul><li>Production: Any involvement</li><li>Distribution: 5% revenue threshold</li></ul>				
Conventional Armaments	10% revenue threshold				
	<ul> <li>Companies with new coal or nuclear-based projects</li> <li>Carbon Intensity above 354gCO2/kWh</li> </ul>				
Electricity Generation	If data is not available on Carbon Intensity:				
	No Paris-aligned commitment				
	<ul> <li>Companies without new sustainable energy-based project</li> </ul>				
	Unconventional O&G:				
	5% revenue threshold				
Oil & Gas	Companies developing new projects				
	Conventional O&G:				
	Less than 40% of revenues derived from natural gas and renewable energy				
Gambling	10% revenue threshold				
Nuclear Power	30% revenue threshold in in developed markets <sup>3</sup>				
- Tradical Tower	5% revenue threshold in Emerging Markets				

December 2022 - 28 -

	Producers/Distributors that:		
Palm Oil	<ul> <li>are not RSPO members and derive between 0% and 5% of their revenues from palm oil with less than 20% of this oil being RSPO-certified palm oil, and that have no deforestation policy in place; or</li> <li>are not RSPO members and derive more than 5% of their revenues from palm oil with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy in place.</li> </ul>		
	<ul> <li>Buyers that:</li> <li>are not RSPO members and whose revenues are dependent on palm oil for more than 5%, with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy.</li> </ul>		
Mining	UNGP, OECD		
Norms-based exclusions:			
Norms	Red Flag Companies: Companies with "Red" ratings in any of the four UNGC pillars		

<sup>&</sup>lt;sup>1</sup> Candriam's exclusion policies are subject to the constraints inherent to the availability of ESG data and to the underlying data methodologies. Therefore, thresholds are analyzed and implemented on a best-effort basis.

For the Belfius Pension Fund strategies, the Belfius Sustainable strategies, the Belfius Equities Europe Conviction and Small & Mid Caps strategies, the Belfius Select Portfolio Sustainable Low and Medium strategies and the Belfius Portfolio Equities US Sustainable strategy, the Level 3 SRI Exclusion Policy applies, as detailed below.

	Exclusion threshold / criteria1
	Controversial activity exclusions
Controversial Armaments	<ul> <li>Any involvement in: Anti-personnel Landmines; Cluster Bombs; Depleted Uranium; Chemical Weapons; Biological Weapons</li> <li>Any involvement in nuclear weapons and white phosphorus</li> </ul>
Thermal Coal	<ul><li>5% revenue threshold</li><li>Companies developing new projects</li></ul>
Tobacco	<ul><li>Production: Any involvement</li><li>Distribution: 5% revenue threshold</li></ul>
Conventional Armaments	3% revenue threshold
Electricity	<ul> <li>Companies with new coal or nuclear-based projects</li> <li>Carbon Intensity above 354gCO2/kWh</li> </ul>
Generation	If carbon intensity is not available:  No Paris-aligned commitment Companies without new sustainable energy-based project
Oil & Gas	Unconventional Oil & Gas:
Oppressive Regimes Adult	<ul> <li>10% revenue threshold</li> <li>Engagement triggered between 5% and 10% revenue exposure</li> <li>5% revenue threshold</li> </ul>
Content Alcohol Animal	<ul> <li>10% revenue threshold</li> <li>No responsible policy and no legal requirement to test</li> </ul>
Testing Gambling GMO	<ul> <li>5% revenue threshold</li> <li>10% and no responsible policy</li> </ul>

December 2022 - 29 -

<sup>&</sup>lt;sup>2</sup>Threshold applies regardless of carbon intensity.

Nuclear	30% revenue threshold in in developed markets <sup>2</sup>
Power	5% revenue threshold in Emerging Markets
	Producers/Distributors that:
Palm Oil	<ul> <li>are not RSPO members and derive between 0% and 5% of their revenues from</li> </ul>
	palm oil with less than 20% of this oil being RSPO-certified palm oil, and that
	<ul> <li>have no deforestation policy in place; or</li> <li>are not RSPO members and derive more than 5% of their revenues from palm oil with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy in place.</li> </ul>
	Buyers that:
	<ul> <li>are not RSPO members and whose revenues are dependent on palm oil for more than 5%, with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy.</li> </ul>

Norms-based	Red Flag Companies: Companies with "Red" ratings in any of the four UNGC
TTOTTIO DUSCU	pillars

<sup>&</sup>lt;sup>1</sup> Candriam's exclusion policies are subject to the constraints inherent to the availability of ESG data and to the underlying data methodologies. Therefore, thresholds are analyzed and implemented on a best-effort basis.

For more information, please refer to <u>these specific activities</u> in Candriam's Controversial Activities policy, which can be viewed on our website:

https://www.candriam.com/fr-be/private/SysSiteAssets/medias/insights/sfdr-publications/exclusion-policy-long-version en.pdf

#### Norms-Based Analysis

Candriam has defined a list of companies presenting the most severe violations of the 10 UN Global Compact Principles and excluded from all article 9 strategies. The final decision is under the responsibility of the Sustainability Risk Committee which assesses and monitors sustainability risks for Candriam's investment activities.

Information regarding actual, suspected and/or related incidents or breaches of international standards are collected through external research combined with internal analyses performed by our ESG.

After identifying any breaches of the Global Compact principles, the analysis uses several parameters to evaluate the severity and magnitude of the breaches:

- Temporal proximity: when did the incident happen and how long did it last?
- Magnitude: what financial costs and environmental damage are related to the incident?
- Credibility: does the incident involve allegations, legal proceedings, etc?
- Recurrence: is this a one-off incident or is there proof of repeated incidents over a given period?

Emphasis is also placed on a company's response when an incident occurs. A company that takes positive, responsible measures to ensure that such a breach does not happen again is considered more favourably than a company that does not acknowledge its responsibility and/or does not take any corrective measures.

#### Business Activities Analysis

**Business Activities:** Companies are exposed to major long-term ESG trends that can strongly influence the environment in which they operate and that may shape their future market challenges and long-term growth. We have identified five key sustainability trends:

December 2022 - 30 -

<sup>&</sup>lt;sup>2</sup> Threshold applies regardless of carbon intensity

- Decarbonise business activities across the board, focusing on the most CO2 intensive sectors
- Deploy renewable energy as fossil energies are progressively phased out
- Scale up waste recuperation and recycling capabilities to reduce resource extraction
- Mitigate impact of business activities on ecosystems to preserve biodiversity
- Harness the opportunities to drive higher industrial and resource efficiencies through digital technologies
- Protect data privacy, build strong and resilient digital networks
- Invest in human capital through job creation, gender equality and decent working conditions
- Foster R&D in fatal and chronic diseases and support universal access to healthcare
- Reduce impact of air pollution on human health through improved air quality
- Prepare for the requirements arising from a Western aging society
- Support the demographic boom in emerging countries through investment in infrastructure and the food supply chain

We group companies based on the industry or sector in which each company operates, its geographic location, business model. We determine the degree to which each industry group is exposed to the five major development challenges, and score them from 0 to +100.

We assess a company exposure, through its revenue generation, assets, CAPEX etc., to five key sustainable challenges: Climate Change, Resource Depletion, Health & Wellness, Demographic Evolution and Digitalisation.

For example, within the Mining sector, steel receives a more negative score on "Resources Depletion" than do metals of the platinum group; while within the Food sector, companies producing healthy products receive a more positive score than junk food.

For each company, the score is the weighted average of the five key sustainable challenges, ranging from 0 to +100. A lower score reflects the company's lower exposure to these major challenges.

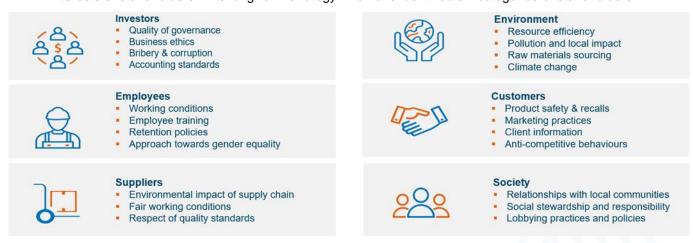

- 31 -

#### Stakeholder Analysis

Relationships with stakeholders give rise to opportunities as well as risks, and are therefore determinants of long-term value. We evaluate the extent to which each company incorporates the interests of stakeholders in its long-term strategy. We have identified six categories of stakeholders:

We determine the relevance of each category based on qualitative and quantitative data. For instance, we may look at the degree of attention paid to shareholders; the frequency of certain events such as accidents and fines; the tangible or intangible financial impact of ESG issues, and the outlook and prospects for a company to improve or deteriorate in these measures. Based on the relevance, we determine weights for each category.

For example, in the energy sector, we place a strong weight on the Environment, in Financials for the banking sector; we place more emphasis on Investors. Within the broad categories, we also assign weight by materiality. For Energy, within the category of 'relations with employees', we stress health and safety; for Financials, within the category of 'relations for investors, we emphasize corporate governance.

For Financials we place special emphasis is given to governance in the stakeholder management analysis. Governance is one of the most important issues for financial institutions. We assess this aspect by analyzing the following:

- Board structure: Independence, expertise of directors, etc.
- Auditors' rotation (mitigates conflict of interest)
- Remuneration: is the remuneration aligned?
- Share capital (avoiding share dilution)

Furthermore, as part of our governance assessment, we incorporate the UNEP FI Principles. We verify if a bank is a signatory of the UNEP FI to assess its commitment towards the ESG issues. Although this is not a hard criterion for exclusion, we believe that banks that have committed to these principles are more prone to display stronger ESG practices.

December 2022 - 32 -

A single category can be represented by different indicators, depending on their relevance to the sector in question. For example, the category "health and safety" of employees is primarily assessed by looking at safety conditions on oil platforms in the Energy sector, whereas, in the Software sector, it would be assessed by looking at workplace stress and ergonomics indicators.

For each theme addressed, the ESG analysis evaluates the strategies implemented by the company (relevance of the strategy developed, human and material resources allocated, pro-activity and follow-up) as well as the company's performances in each category relative to its competitors and the major trends in the sector.

The combination of this evaluation and the weightings for each category of stakeholder relations obtained from Stakeholder analysis give the overall Stakeholder score (weighted average of the six individual stakeholder relations scores) for each company. The company's score ranges from 0 to 100 and are calculated using a best-in-universe regional approach.

#### ESG Score

Following the Business Activities and Stakeholder Analyses and respective scoring, we then combine both scores (out of 100) to form an ESG rating for each individual issuer. Both pillars take on a weighting, depending on their materiality for each sector & company and yield an ESG Rating from ESG 1 (Best) to ESG10 (Worst).

A more fundamental analysis, called "ESG Conviction", may supplement our ESG analysis which uses a more materiality-based approach. This analytical framework focuses on the most relevant ESG risks and opportunities to which issuers are exposed in order to select those best positioned in terms of sustainability. Issuers are scored against material KPIs to determine the final ESG score and eligibility. ESG Conviction analysis is applied as a complement to our current process to enrich certain fundamental and active ESG investment strategies.

Since the ESG Conviction framework uses a more in-depth building block to enrich our analysis, the resulting rating, from ESG1(best) to ESG10 (worst) will be the final ESG rating.

# 3.6. How often is the ESG evaluation of the issuers reviewed? How are any controversies managed?

Our ESG universe is updated on a monthly basis taking into account the latest data from external providers.

Each sector and country is periodically analysed by assessing the evolution of sustainability trends, as well as the relevance and materiality of each model or framework used.

The goal is to ensure that the models used by the analysts optimally reflect the sustainable development risks and opportunities affecting the sector in question. Companies are continuously monitored and the sector is reviewed at least twice a year.

If there is a major event that may affect the rating assigned to a company (i.e. merger and acquisition, scandal, sustainability controversy etc.) or country (i.e. war, natural disaster, coup d'Etat, etc.), the ESG analyst will launch an alert on the issuer.

There are several types of alerts that can be considered:

SRI Monitoring Alert (for information only): This alert explains how the ESG team assessed the
incident or controversy, even if there is no immediate change in the decision about the
company's eligibility.

SRI Alert: This alert means that the portfolio manager will no longer be able to add to his position in this issuer

If an issuer is newly excluded due to the company-wide exclusion or norms-based filter, each portfolio manager has to sell the position within a period of one month. Depending on market conditions, rare exceptions may be granted by the CIO, RM & the Global Head of ESG Investments & Research in order to accommodate, for example, a potential liquidity issue.

December 2022 - 33 -

#### 4. Investment Process

## 4.1. How are the results of the ESG research integrated into portfolio construction?

**ESG** considerations are taken into account within each individual investment process. Our ESG integration approach leverages on the frameworks and analysis conducted by the ESG Team. The consideration of ESG aspects in the financial/credit framework will impact the final issuer score/color and valuation for our equity strategies and credit recommendation for fixed income strategies. To this end, integrating ESG considerations will ultimately impact the construction of the final portfolio.

#### ESG Integration for Equity Strategies

At Candriam, we integrate ESG information and analysis into equity investment decisions in order to better assess the risks and opportunities that stem from the business activities and operations of companies. Respecting and preserving the distinct nature of each philosophy and approach across our range ofinvestement processes, Candriam's fundamental equity investment strategies are impacted at each of the following levels:, *Fundamental Analysis, Valuation and Portfolio Construction*.

#### 1. Fundamental Analysis

Candriam's fundamental analysis is based on five pillars: Quality of Management, Business Growth, Competitive Advantage, Value Creation and Financial Leverage. Each of these pillars receives a colour/score that determines the final assessment of a company.

Candriam's fundamental equity strategies<sup>4</sup> take into account the "Business Activities Analysis" and "Stakeholder Analysis" scores in fundamental analysis and "Company Valuation" as follows:

#### **Quality of Management**

In order to obtain a holistic view on the overall governance and soundness a company's management, we assess a company's relationships with several stakeholders by considering and integrating qualitative ESG information and quantitative ESG scores that result from the ESG stakeholder analysis. Further to the assessment of strategy, stability, track record, corporate communication and other financial criteria, we assess the Management team on its relationships with its stakeholders.

The ESG Stakeholder analysis is taken into account in the Quality of Management assessment. If the company 'stakeholder' score belongs to the 3<sup>rd</sup> tertile of its universe<sup>5</sup>, the 'Quality of Management score' cannot be 'green'.

December 2022

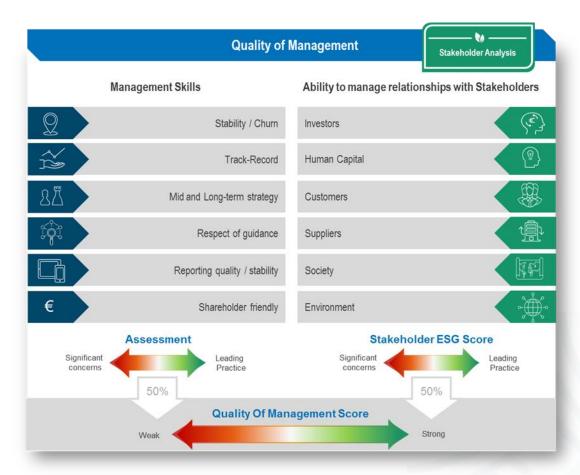

<sup>&</sup>lt;sup>4</sup> Applicable for developed markets (Emerging Markets get a specific analysis)

<sup>&</sup>lt;sup>5</sup> Investment universe varies across strategies

#### **Business Growth**

In the assessment of business growth, the ESG Business Activities analysis of issuers is taken into account. Candriam has identified key long-term sustainability trends which strongly influence the environment in which companies operate and which influence their future market challenges and long-term growth and prosperity.

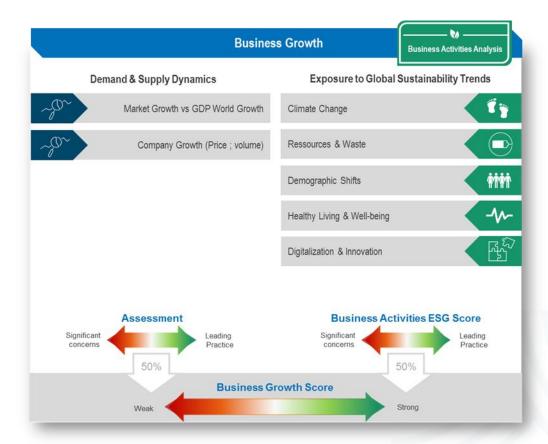

The five defined key Sustainability Trends illustrated above are analysed in order to assess the growth potential in conjunction with other key market drivers and regulatory risk.

More specifically, we consider the supply & demand dynamics as well as market drivers, the **score resulting from the ESG Business Activities analysis**, and potential regulation constraints to determine the overall score for the pillar.

December 2022 - 35 -

#### Competitive Advantage

We perform an intrinsic analysis of products and services, R&D, customer support, and other areas relevant to the company's business, including opportunities and risks resulting from sustainability regulation considerations.

We use the Porter concepts to analyse the competitive position of the company in its industry, such as the threat of new entrants, threat of substitutions, and the bargaining power of suppliers and customers.

We check potential constraints resulting from sustainability regulation and assess their impact on the competitive advantage of the company, as well as risks and opportunities including **barrier to entry**.

For instance, given the ambitious climate objectives of many countries across the globe, there has been a strong emergence of regulations and legislations pertaining to emissions, pollution, amongst other environmental considerations. To this end, we expect companies that have business activities that positively contribute to those environmental objectives to outperform in the long run.

This analysis leads to a qualitative view which is taken into account in our overall assessment in this pillar.

#### Final Fundamental Assessment

For each criteria, companies receive one of the following scores or colors: 0/Red (weak), 1/Orange (medium) or 2 /Green (strong quality). All the five scores are then compiled in order to get a global score/colour grade of the companies which determine the "quality score" of a company: "High Quality" (Green), "Satisfying Quality" (Orange) and "Low Quality" (Red).

The ESG assessment is a contributing factor to determine the final colour/score of a company, which in turn will determine the weighting of this position in the final equity portfolio.

December 2022 - 36 -

#### 2. Company Valuation

We further evaluate the dynamics of their profitability and growth, the liquidity of the equity, and valuation. Our valuation is predominantly based on DCF models using at least five years of projected Free Cash Flow, based on our internal projections.

We adjust the discount rate based on the final score/colour of a company which **takes into account ESG criteria**. For example, for green companies, we reduce the discounting rate within our DCF. This modification has a significant impact on the DCF- valuation.

#### 3. Portfolio Construction

Within the eligible universe, the process is mainly colour-based, bottom-up stock selection; **weightings** in the portfolio are function of the global colours of the companies. The sector weight deviations from the benchmark are not a strategic objective; they result from our convictions on individual stocks, with top-down sanity checks and other deviation boundaries.

The weight is significantly impacted by the colour grade (including the ESG score), and the upside potential derived through our valuation analysis (that takes the ESG score into account as well).

We favour companies that are 'green' in all aspects. An 'orange' company will have a lower weight and 'red' companies are in principle excluded, or extremely reduced, depending on the process.

#### ESG Integration for Fixed Income Strategies

#### Corporate issuers:

At Candriam, we believe that bond markets exhibit a asymmetric risk-return profile. The cornerstone of our investment philosophy is a high conviction approach based on rigorous bottom-up research in order to gain a deep and detailed understanding of the creditworthiness of every issuer. We believe that a complete assessment of the risks pertaining to issuers, and particularly downside risk, cannot be obtained without consideration of ESG factors. In line with this long-standing investment philosophy, our fundamental credit analysis has integrated ESG criteria over the past years while establishing our credit recommendations for every issuer in the investable universe.

Our credit analysis is based on a study of both the business profile analysis and financial profile analysis. During the business analysis step of our credit research process, we explicitly integrate ESG factors in order to evaluate the profile of a specific issuer. We believe a study of ESG factors is indispensable in order to get a complete understanding of the credit worthiness of an issuer. An entity's ability to fulfil its financial obligations includes both the willingness as well as the ability to reimburse its debt. A scrutiny and an evaluation of ESG factors provides us with vital extra-financial elements, enabling us to get a clear view of issuers profile. This study is carried out by our credit analysts who are specialised by sector and across investment grade, high yield market and emerging corporate bond markets. This credit analyst team is supported by our independent ESG research unit that includes 8 analysts that cover global credit markets and 3 analysts that are responsible for engagement with companies.

The **ESG analysts** provide a strong platform for our credit analysts as a negative ESG assessment on an issuer will provide a negative signal. Having done the ground work on all the issuers, the ESG analysts are a valuable source of information and are a strong complement to our credit analysts, with whom they enjoy close interaction and knowledge sharing.

The ESG integration is carried out by our credit analysts and is geared towards better evaluating risks presented by each issuer and does not aim to exclude issuers. Instead the aim is to identify strengths and weaknesses from an ESG perspective so as to unearth opportunities and identify threats. The ultimate result is an assessment of the business profile of each issuer integrating ESG factors.

December 2022 - 37 -

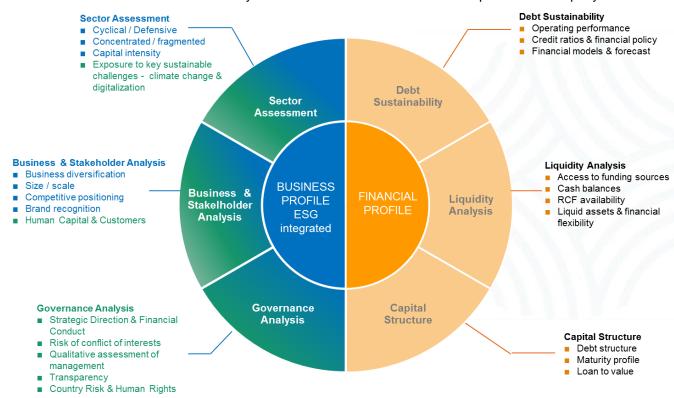

The environmental, social and governance factors are evaluated **based on their relevance and materiality to a company's credit worthiness**. We aim to combine qualitative and quantitative assessments on each of the factors in order to gain a greater insight into the issuers future prospects. We use a sector-based approach to identify the aspects representing high-impact risks to enhance risk-adjusted performance. We do not limit our analysis to examining historic data as we use a forward looking approach, meaning that we will determine how these material factors may evolve in the future.

In addition to the daily interaction between the ESG team and the credit analysts, a formalised monthly ESG committee is also attended by credit analysts, portfolio managers and ESG teams, chaired by the Global Head of Fixed Income and the Head of ESG Investments and Research. During this meeting, both teams discuss their findings and results not only in terms of exclusions of issuers, but also in terms of the strengths and weaknesses of issuers based on ESG factors. Furthermore, trends and regulatory frameworks within different sectors are discussed and shared. Our ESG analysts also take part in our credit committees in order to gain a clear understanding of the overall credit recommendation for each issuer and the role that ESG integration has played.

Below we illustrate and detail how our analysts deal with the 3 factors for each issuer they analyse in order to build an ESG case and ultimately determine how it affects the business profile of a company.

#### 1. Governance Analysis

Governance, defined as a system by which entities are directed and controlled, has always been an important element of our credit analysis. Corporate governance is critical in helping companies achieve their goals and control risks through creating policy and monitoring its implementation. The integration of the key metric is vital while assessing the future prospects of a company. Our credit analysts carry out regular meetings with management and benefit from their experience and long-term interactions with CEOs/CFOs in order to gather data and information on governance. Our framework allows us to establish a governance analysis for each company through a thorough understanding of 4 key themes (Strategic Direction & Financial Conduct; Risk of conflict of interests; Qualitative assessment of management; Transparency) both on a quantitative and qualitative level. These themes are analysed based on material factors that have significant impact (both positive and negative) on the overall governance picture, based on the ESG analysis model.

#### 2. Business & Stakeholder Analysis

December 2022 - 38 -

The social factor in ESG integration examines the degree to which a company manages its association with its workforce and with society at large. This segment deals with identifying key themes that correspond to the social pillar and evaluating how best they have been addressed by the company. Due to the rather specific nature of certain themes, they can only be applied to the relevant sectors. Product safety for example does not always concerns the information technology sector, but will apply to automakers. Employee safety is more relevant to sectors like mining and construction rather than media and telcos. Other themes, such as training and career management, on the other hand can be applied to all the sectors. We aim to deliver the highest level of detail and granularity in our ESG integration and hence we differentiate between each social theme when we study them. We also remain conscious of the fact that materiality differs amongst the different social themes, and there is a demonstrate relevance of the sector specific issues.

#### 3. Sector Assessment

The environmental angle is analyzed by primarily focusing on aspects such as climate change and resource depletion, while also paying close attention to pollution and biodiversity in certain cases. The aim is to gain a clear understanding of the risks that each issuer exhibits from an environmental perspective. This pillar is highly driven by regulation, which impacts all sectors though in a different manner. Certain sectors (Automobile, Energy) are more CO2 intensive and hence the transformations needed are likely to be more intensive as a result of far greater regulation. The framework hence differs between CO2 intensive sectors, though each one is subject to regulation and an understanding of how a company aligns itself to the various targets that have been set is key.

#### 4. ESG integration in Business Profile Rating

After the ESG segments have been assessed, we integrate them in our analysis of the business profile, specifically within the 3 themes that have been mentioned above, which are Sector Assessment, Business Analysis and Governance. In doing so, on a qualitative basis, our analysts are able to incorporate the results of the ESG framework into the overall business profile evaluation. It is important to note that a weak ESG assessment can have a material impact on the business profile score, moving it from strong to satisfying or even to weak, depending on the amplitude of the results. Furthermore, in terms of the ESG framework, our credit analysts understand that structurally the ESG risks of an issuer are skewed towards the downside. A good ESG evaluation is likely to help the company over the longer term. However, a weak one is likely to have an immediate impact on the issuer. As a result, credit analysts pay special focus on weak ESG assessment, which will be more likely to bring about a change in our business profile rating.

Finally, we also pay a special attention to the afore mentioned ESG ranking, which is calculated by our ESG team as a part of the exclusion of the least credit worthy issuers within our investment universe. For every issuer, we do consult this ESG ranking in order to compare with the ESG assessment that is carried out by our credit team. This final step, before actually providing an final business profile score, allows our credit analysts to perform an overall check in terms of their ESG evaluation. Indeed, if an issuer is deemed weak by our ESG team, then it cannot have a strong business profile score.

#### Sovereign issuers:

For sovereign issuers, Environmental, Social and Governance (ESG) factors are taken into account in our country and government bond selection process. The analysis and selection of government bonds consists of three steps: the sovereign credit recommendation, the country valuation and the government bond selection.

ESG factors are integrated in the process through the determination of our sovereign credit recommendation.

In the **country valuation**, we will then look at liquidity and compare the sovereign credit recommendation of each country against its market valuation. This gives us an indication of the relative and absolute value of the different countries in our universe and this on different curve segments. This provides an indication of both relative and absolute value.

In the third step, the **government bond selection**, we use internal tools to spot valuation opportunities among countries and by maturity bucket. We detect these opportunities through a systematic analysis

December 2022 - 39 -

of the spreads, aided by an internal Relative Value Tool (carry &roll down) and statistical analysis of the trends of spreads for each instrument.

### 4.2. How are criteria specific to climate change integrated into portfolio construction?

ESG factors are embedded in the financial process in order to better assess risks and opportunities. The results of the Business Activities analysis, which includes assessing exposure of corporates to climate change, are integrated in our financial/credit framework. It will thus have an impact on the final issuer score/color and valuation for our equity strategies and the credit recommendation for fixed income strategies. Moreover, each investment strategy aspires to have a lower carbon emission in comparison to its relative benchmark or below an absolute threshold, depending on the investment strategy. Recall that all strategies may not invest in any company that derives more than 10% of its revenue coming from Thermal Coal.

For further information on ESG integration, please refer to question 4.1.

## 4.3. Has the ESG evaluation or investment process changed in the last 12 months?

Not applicable

# 4.4. Is a part of the fund(s) invested in entities pursuing strong social goals/social enterprises?

The fund covered by this Code seeks to invest does not actively seek to invest in entities pursing strong social goals. However, as the fund applies an ESG approach across all asset classes, its investments are geared towards companies that display sound ESG practices and that do not harm society.

The funds covered by this Code seek to invest in entities positively contributing to society. Although the strategies do not apply an "impact" approach, they strive to exceed benchmark averages on the verifiable impact indicators. More specifically, these strategies aspire to obtain a lower carbon emission against their benchmarks or compare to an absolute threshold, depending on the investment strategy. We also aspire, for sovereign strategies, to obtain a better Freedom House and Environmental Performance indexes compare to their respective benchmarks.

#### 4.5. Does (do) the fund(s) engage in securities lending activities?

The funds does not conduct securities lending/borrowing.

#### 4.6. Does (do) the fund(s) use derivative instruments?

Depending on the investable asset classes and within the limits defined by the approved prospectus, SRI portfolios may use derivatives, as defined below. The general principle on the use of derivatives is that short positions via derivatives can only be used to cover long positions. No net short positions are authorized, except in exceptional cases where adequate hedging cannot be achieved due to lack of instrument coverage.

For all derivative transactions, the fund is required to use as counterparty, only those financial institutions that comply with the principles of the United Nations Global Compact, as described in Section 3.3 of this Code at the time of the transaction.

• Interest rate futures: management of the funds in question involves the regular use of interest-rate futures based on government bonds belonging to the SRI universe, in order to adjust the portfolio's duration (upward or downward) across the different segments of the yield curve. These transactions are limited by the legal rules applicable to funds subject to the European Directive, i.e., to 100% of

December 2022 - 40 -

the fund's assets (including other derivatives). As the underlying is included in the SRI universe, there is no impact on the fund's ESG quality.

- Interest-rate swaps: management of the funds in question may involve the use of interest-rate swaps in order to trade a fixed rate for a variable rate, if the counterparty belongs to the SRI universe. These transactions are limited by the legal rules applicable to funds subject to the European Directive, i.e., to 100% of the fund's assets (including other derivatives). As the underlying is included in the SRI universe, there is no impact on the fund's ESG quality.
- **Equity swaps**: these transactions are permitted, provided that the index or basket of shares meets the criteria of the SRI universe.
- Credit derivative indices & Equity index futures: may be used temporarily for hedging purposes and in the event of large subscriptions or redemptions.
- Credit Default Swaps (CDS): the funds in question may use CDS on an SRI issuer in the portfolio if the counterparty to the transaction is a financial institution that also belongs to the SRI universe. As both the issuer subject to the CDS and the counterparty to the transaction belong to the SRI universe, these transactions have no impact on the fund's ESG quality.
- **Forwards**: forwards are exclusively used to quickly adjust the portfolio's exposure to foreign exchange risk in the event of strong market fluctuations or a major change in the portfolio's composition. These transactions, which have no impact on the fund's ESG quality, have to be done with a credit institution that is part of the SRI universe.
- **Listed options / OTCs** on individual equities or on bond issuers: these options are valid provided the issuers are in the SRI universe.

Single underlying derivatives must be compliant with the company-wide exclusion policy.

#### 4.7. Does (do) the fund(s) invest in mutual funds?

Depending on the investable asset classes and within the limits defined by the approved prospectus, the investment strategies may invest in mutual funds. External funds must have an exclusion policy relating to controversial weapons, thermal coal and tobacco.

#### 5. ESG Controls

5.1. What internal and/or external control mechanisms are in place to ensure compliance of the portfolio with the ESG rules on managing the fund(s) as defined in section 4?

Several departments are in charge of internal control: risk management, internal audit and compliance.

Each department is independent of the Fund Management Department and is placed directly under the authority of Candriam's Group Strategic Committee.

The risk management department ensures that the securities making up the strategies, classified as Article 9 according to the SFDR, comply with the company-wide exclusion policy.

One of the tools used by this department is the constraints server, a tool that combines all the constraints and limits required to manage the investment funds. It contains regulatory and contractual constraints as well as internal limits and constraints used to prevent operational errors. Constraints are applied, for example, to the:

- ESG investment universe;
- list of 42 authorized investments;
- potential ratios (liquidity, dispersion) defined;
- main regulatory constraints applicable to the fund;
- "list of credit warnings" and "list of equity warnings".

Once the constraints have been configured in the constraints server, any order entered by the portfolio manager is immediately checked against them before the order is sent to the markets (*ex-ante* control). The portfolio manager is alerted in the event of a breach of constraint.

The Internal Audit Department carries out inspections and subsequently advises as necessary to ensure the performance and effective implementation of the internal control system in force. The inspection missions represent the lion's share of the audit department's work and aim to provide the Group Strategic Committee with an objective and independent assessment of a particular domain (function, process, system, ...).

December 2022 - 42 -

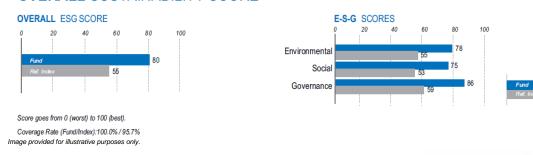

#### 6. Impact measures and ESG reporting

#### 6.1. How is the ESG quality of the fund(s) assessed?

For developed markets corporate issuers, we can measure the ESG quality of the fund is assessed through internally developed ESG scores which can be measured against the fund's benchmark. We track the ESG quality using an overall ESG score as well as E, S and G scores, as illustrated below:

#### **OVERALL SUSTAINABILITY SCORE**

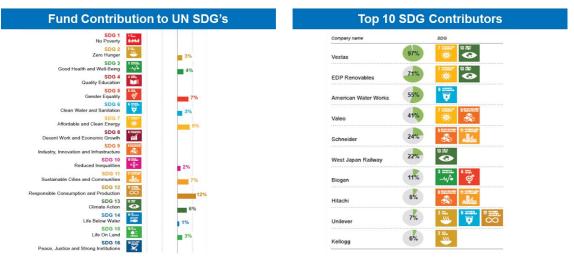

Please note that these scores are not disclosed publicly.

#### 6.2. What ESG indicators are used by the fund(s)?

Please find below examples of ESG indicators available for developed market corporate issuers:

- Carbon Footprint: Carbon Footprint Metrics of an investment portfolio refers to measurement of greenhouse gas (GHG) emissions by summing the proportional GHG emissions of the underlying holdings, proportional to the share of ownership. For further information on the carbon footprint, please refer to the Appendix.
- Water Consumption: Measures the asset weighted water consumption of a portfolio normalized
  per million \$ invested (expressed in cubic meters water / million \$ invested). Data sourced from
  "Trucost", does not include the supply of drinkable water and the wastewater that enters in the
  company's facility to be treated.
- **Energy Mix**: The Energy Mix of a portfolio refers to the mix (percentage wise) of underlying energy sources used to generate electrical power by the underlying utility companies within a portfolio.
- Waste Production: Measures the asset weighted waste production of a portfolio normalized per million \$ invested (expressed in tons of waste / million \$ invested). Data sourced from "Trucost", waste production data includes landfill waste, incinerated waste and nuclear waste.
- **Women on Boards**: Asset weighted Percentage of Female Board Members at the companies held in portfolio.
- **Independent Board of Directors**: Asset weighted Percentage of Independent Board Members at the companies held in portfolio.
- UN Sustainable Development Goals -- The sustainability Development Goals (SDGs) are a collection of 17 global goals set by the United Nations General Assembly in 2015, to be achieved

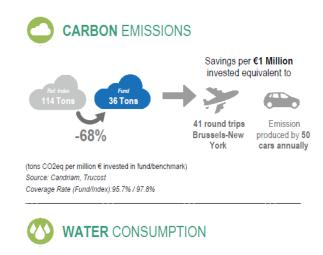

December 2022 - 43 -

by year 2030. Through their activities, companies can directly contribute to the achievement of a number of these goals; by means of their employment policies, products and services, governance and by the way they integrate environmental and social goals into their operations

Image provided for illustrative purposes only.

• Real Life Impacts -- We aim to go beyond transparency by providing investors with a better understanding of impact indicators. We seek to bring these indicators to life in a more comprehensive manner for investors by providing real life examples of their contribution, as illustrated below:

- Emissions savings: The "Saving per 1 million € invested" indicator is based on the difference in Carbon Emissions between the Fund and the Reference Index. It compares this difference to the equivalent emissions from both commercial flights and family cars. For commercial flights, it is expressed in the number of return-flights from Brussels to New York in economy class. For family cars, it is expressed in the number of cars based on 13 000 km per year by cars emitting 120g CO2 per km on average (Source: Eurostat).
- Water savings: The "Saving per 1 million €invested" indicator is based on the difference in Water Consumption between the Fund and the Reference Index. It compares this difference to the equivalent consumption from both the average household and number of showers. For households, it assumes an average daily consumption of 144 litres per person with 2.3 person per household. For showers, it assumes an average consumption of 40 litres per shower.
- (cubic meter of water per million € invested in fund/benchmark)
  Source: Candriam, Trucost
  Coverage Rate (Fund/Index):95.7% / 97.7%

-91%

# 6.3. What communication resources are used to provide investors with information about the SRI management of the fund(s)?

#### **Management Company - Belfius Investment Partners**

The documents and information on this fund address the ESG quality of the portfolio via:

Savings per €1 Million

invested equivalent to

Water usage

from 258.264

Consumption of

85 households

- the fund's investment strategy;
- the selection of the largest exposures in terms of securities in the portfolio, as described in the fund reports.

Details of the securities in the portfolio are also available in dedicated product sheets provided to investors.

More generally, the official documentation of the fund can be found on the Belfius IP website. https://www.belfiusip.be/fr/fonds-investissements/index.aspx

#### **Investment Management Company - Candriam**

Publications regarding the product capabilities such as prospectus, factsheets, and details of the holdings are available on our corporate website, in dedicated product sheets, in the "Search for a Fund" section;

December 2022 - 44 -

Candriam's funds are described on the corporate website via the fund-search engine https://www.candriam.com/en/professional/funds-search/#/sri=true

The Stewardship report incorporating Engagement and Proxy Voting reviews can be viewed on Candriam's website:

SFDR Belfius | Candriam

Candriam's Corporate Social Responsibility Report, can be viewed at the following link:

https://csr.candriam.com/

For any request on research available to investors/savers or the breakdown of the securities in the portfolios, please contact <a href="mailto:lnvestor.support@candriam.com">lnvestor.support@candriam.com</a>.

6.4. Does the fund management company publish the results of its voting and engagement policies?

Yes, the company publishes the results of its voting and engagement policies.

Please refer to question 6.3. for the links to our publications.

December 2022 - 45 -

#### 7. Appendix

#### 1. ESG Sovereign Framework & UN Global Compact Principles Considerations

Candriam's framework is specifically structured towards identifying violations of the UNGC principles, and towards excluding countries that violate the 10 principles from the investment universe.

For instance, countries that are on Candriam's Oppressive Regimes list are automatically excluded from financing. Countries on the list are those that are in systemic breach of internationally recognised human rights, addressing **Principles 1 and 2.** 

Countries are evaluated according to their scores on four equally-weighted domains, according to the four capitals approach - Human, Natural, and Social Capital, as well as Economic Capital, thus addressing the UNGC principles. Each of these domains contain subdomains as follows:

- Human Capital (Addressing Principles 3, 4, and 5) Labour, Health, and Knowledge
- Natural Capital (Addressing Principles 7, 8, and 9) Total Environmental Impact, Transportation Policy, Non-GHG emissions, Energy & Climate Change, Ecosystems & Biodiversity, Water consumption & Emissions, Raw Materials & Wastes, and Exposure to natural hazards & management of disasters
- Social Capital (Addressing Principles 1, 2, 6, and 10) Democracy, Corruption & The Rule of Law, Governance, Fairness, and Peace
- **Economic Capital** Indebtedness, Economic activity, Budget Deficit, Health of the Financial System, International Competitiveness & Balance of Payments, Economic Positioning, and Foreign Dependency

In addition to this, Candriam applies several exclusion filters, as follows:

- Freedom in the World Index, World Bank Control of Corruption, and World Bank Voice and Accountability – a country is required to achieve a minimum threshold for each of these metrics.
   Failing one or more of these thresholds results in the Social Capital score of a country being set at Zero, which severely impairs the overall score (up to 25% of the overall score), and results in a country being excluded from the investment universe in the vast majority of cases
- Financial Action Task Force any country on the "call to action" list automatically receives an overall score of Zero, and is thus not eligible for inclusion in the investment universe
- Oppressive regimes list any country that appears on Candriam's Oppressive Regimes list is automatically excluded from investment eligibility.
