Investment Objective

A mixed fund tapping into three performance drivers: international bonds, international equities and currencies. At least 40% of its assets are invested in fixed income products and money market instruments at all times. Its flexible allocation aims to mitigate capital fluctuation while seeking sources of return. The Fund aims to outperform its reference indicator over 3 years.

Fund Management analysis can be found on P.4

Equity Investment Rate: 42.43%	Net Equity Exposure: 19.38%

Fund Performance vs. Reference Indicator over 10 Years

(1) Reference Indicator: 40% MSCI AC WORLD (USD, Reinvested Net Dividends) + 40% ICE BofA Global Government Index (USD, Coupons reinvested) + 20% ESTER capitalized. Quarterly Rebalanced. Until 31 December 2012, the reference indicators' equity indices were calculated ex-dividend. Since 1 January 2013, they have been calculated with net dividends reinvested. Until 31 December 2020, the bond index was the FTSE Citigroup WGBI All Maturities Eur. Until 31 December 2021, the Fund's reference indicator comprised 50% MSCI AC World NR (USD) (net dividends reinvested), and 50% ICE BofA Global Government Index (USD) (coupons reinvested). Performances are presented using the chaining method. Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

FUND MANAGEMENT ANALYSIS

Market environment

In July, investors were already anticipating an upcoming pivot by the US central bank to account for an economic slowdown and more moderate inflation; that is, a return to accommodative monetary policy within a few months. In August, the central bankers – Jerome Powell in Jackson Hole and Isabel Schnabel in Frankfurt – called them to order, reiterating the importance of fighting inflation, regardless of the consequences for growth. Inflation fell slightly in the US, from 9.1% to 8.5%, but it remains high in Europe and under renewed pressure from Russia's threat to the gas supply. The prospect of a prolonged tightening of US monetary policy coupled with a sharp slowdown in European growth led to a decline in risk assets and significant pressure on yields in developed countries. In China, the government continued to implement accommodative policies to support growth, including by lowering rates on its one-year loans and announcing stimulus packages of nearly CNY 1 trillion. However, the effects of these policies on the economy still have yet to materialise.

Performance commentary

In this difficult environment for markets, we benefitted from our highly cautious positioning, characterised by equity and credit market hedges. As a result, we significantly outperformed our reference indicator over the period. In addition, European banks followed US banks and resumed trading in Russian bonds in August. Spurred on by better liquidity, the Russian assets in our portfolio appreciated, contributing positively to the performance of the strategy over the period. As a reminder, we are committed to selling the remaining Russian securities in our portfolios, as market conditions allow, as protecting our clients' interests remains our primary objective.

Outlook and Investment strategy

The inflationary environment and the restrictive approach pursued by central banks guarantee increased volatility in yields and, in practice, in bonds, for both sovereigns and companies. Furthermore, the acceleration of quantitative tightening, coupled with the resumption of treasury bond issuance linked to fiscal spending, is likely to drive sovereign bond yields higher in the coming months. In the credit markets, while the yields on offer are increasingly attractive, the negative impact of high energy prices on fixed costs, uncertainty about demand in the coming months and high yield volatility are preventing spreads from narrowing significantly from their current level. We have therefore increased our hedges (mainly on European high yield), which now cover almost all of our exposure to the asset class. Valuations are becoming attractive again and the time will come to redeploy our cash to benefit from long-term alpha generation; however, for the time being, we favour risk management over performance generation.

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

FCP: Fonds commun de placement (French common fund).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer). Ratings are published by rating agencies and offer the investor reliable information on the risk profile associated with a debt security.

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to maturity corresponds to the concept of actuarial yield. It is, at the time of calculation, the rate of return offered by a bond in the event it is held until maturity by the investor.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2021.

SFDR Articles - Fund Classification: Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective.

Main risks of the fund

Equity: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization. **Interest rate:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **Credit:** Credit risk is the risk that the issuer may default. **Currency:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. The Fund presents a risk of loss of capital.
